# INTRODUCTION

We need not only to describe what we already know. But how to go beyond this framework? Do you have a word to describe something unknown?

Science, through the analysis of test elements of reality, constantly multiplies a new concept. Neologisms, specific to each language area, a feature which has become accustomed. But the point something that goes beyond scientific analysis, to reach a general, abstract reflection of the emerging ideas in someone's head, which has no precedent. Even if an individual thinker, able to call them what to do, to make clear to others?

Philosophy is full of such attempts. If they are confirmed in the pragmatic practitioners of effective, the theory becomes more understandable. What if this does not happen? Then remains in the shadow of oblivion, resulting thoughts carefully puts on the shelf somewhere, summarizes, and sometimes return to them again, patiently waiting.

Specific science evolve in ever new directions. Luxuriantly bear fruit and do not allow ordinary neutrality of what Not know ? Some early ideas become obsolete, changing the language of description.

For the history of philosophy, which does not mix anything in time, there is no such dilemma. But what say Aristotle, Aquinas and Kant had lived today, and have current knowledge? It is not a simple comparison, this is written before the current present. What would they say as thinkers, and for us now? Is rutherford earlier views, or to immediately threw them into the dustbin? Lacks a clear possibility of a continuation of earlier ways of thinking. Inability is increasing, the more thinking is going in different directions from the past and the more the changed language or a description. It becomes necessary to reduce the reflection predecessors, the major simplification, or ignore, and the transition to his specific argument ? So what do successive philosophers.

One of the most valuable human skills is the ability to run their imagination. Understood as the ability to reflect reality provides enormous creative possibilities. First of all, allows you to manipulate elements of reality. One can imagine any thing, and manipulate it, such as spoons can fly, and even building a huge lie upside down. You can suspend operation of the laws of nature, rather than to attract the mass may start to push back. For the imagination, such manipulations are allowed. Manipulating you can create a new reality.

Reading books, watching films or works of art, do not always realize that what we see are products of human imagination. Although the production of a

viable product, however, are an expression of what previously happened only in the creator's head. Are we aware of it or not, the imagination is in a continuous manner we used. So let's consider what it is and how far we can trust it.

If we think about anything, run the imagination. Everything we learn is also associated with it. But the use of it is always the same? Whether it is consistent, always acting the same function? Let us try to find circumstances that cause the imagination begins to work differently. When govern its other rights, depending on the relevant factors. Search for these factors.

In addition to the existing world-made only in our heads, Real World is, after all, our environment and ourselves, and the World Wildlife created by man. We are also next to other people. We see it all, we perceive the various senses, it affects us. Clearly distinguish the real world (for certain: the illusion of objectivity) from the world of the subjective (or perceived only as a more subjective).

How to start the imagination depends on whether we are moving the items that we know of reality (the illusion of objectivity), or not. When we manipulate the elements that we know, our imagination is concrete. May not be consistent with what we know (for example, the apparent curvature of a stick in water), but always, all the elements of the image created in the mind are known to us.

And if we think in this way, there would be trouble. However, we have a problem, because our imagination has long since escaped from the secure courtyard. Homo sapiens tore his thinking from the real world. Thoughts wandered to a completely unknown lands. Created imagination. He began to make themselves something that had never seen, and even if they never see, to believe that this creature of his imagination, really exists. Curiosity stemmed initially from a reflection on birth and death. What is more, and what it was before, what happens before you born and, once we die. Answers to these questions require a departure from imagining only known to us the real world. It was necessary to imagine something that can not be seen. And so was the transition to the World of Souls, Beings in this world, the rights to govern there, and the interaction of that and ours. As we can see, the imagination works differently when we think about the elements of the well-known fact, and quite differently when we think about something that nobody has ever seen, did not suffer, we do not know. Let's call this one the first real imagination, and the second, speculative imagination.

There is the first. Based on the so-called designat such things occurring in the real world, unlike forms of expression by the people, for example, the concepts, or words or writing on some medium or other expressions such as gestures or mime alphabet for the deaf. We can use it generally for two purposes:

1. to understand better the world around us, the law governing it, all occurring in the elements, use them in practice, enjoy them - let's call it scientific,

2. in order to manipulate the intellectual, emotional, and emotional impact on people through:

-- to exert a constructive influence on the psyche of other people, such as acquisition of cultural, subordinating the other constructive purposes, etc. - we call it imagination suggestive,

-- conscious or unconscious cause destruction, for example, by absurdity, nonsense, humbug, jumble of thoughts and arguments, etc. -- it is a dark imagination.

If we now see speculative imagination, imagination is different from the real, its role is not clear. Recalls an expedition into the unknown, look around at the situation, going to reconnoitre. You can find the number of potential alternatives that might acquire the characteristics of the scientific imagination. Speculative imagination retains full autonomy, which is constantly penetrating the still growing area of everything that is not directly accessible to us.

Each of these types of imagination are acquired by different rules. The scientific subject of scientific methodology. Depending on whether they are or social sciences, the methodology is somewhat different. Suggestive based on artistic and aesthetic abilities. Dark for incompetence, unhealthy ambitions, complexes, mental illness. The first allows a real impact on things and people in an orderly manner, possible to forward the next generation and further improve and progress. Determines the economic and social development. Vivid imagination and the dark can contribute to, on the one hand, great experience, or on the other hand, to misunderstanding, confusion, immersed in a negative mental states or illness. Imagination they share a common trait, manipulate designat but in a way that is not scientific, not a methodology recognized by science. Also use the rules, such as aesthetics, harmony, and the other, but do not act directly on the level of material life, appear beside him. The scientific imagination is verifiable and subjected to criticism. It builds a kind of wall, depending on, creates a strong structure gives the products of virtually smooth. It allows you to communicate with various representatives of science, is disciplined terminologically. Allows you to interact, complement the gaps identified by their predecessors. Manipulating designata is there only for a specific purpose. If there is no scientific justification, it shall be considered as a waste of time, the action unjustified and unnecessary.

Vivid imagination designata manipulates in order to influence the people (their feelings and emotions). Manifest both in the works, literature, arts, live coverage talking word eg, in the customs and habits, and radio programs in the media (movies, Electronics and derivatives), the ethical and legal standards, as well as other classified or unnamed here forms. It is extremely rich. Developed over millennia, rooted in the concept of civilization and humanity, is an attribute that everything associated with the cultural heritage. There is no way to grasp it, is like

the ocean, you can only travel on designated routes. Knowable by individuals, ambiguous, multi-dimensional, variable and unbridled. Its authors are admired by others. Often associated with the glory lasts for ever.

Imagination is a pervasive dark, there is no clear form, structure, names of individual products. Does not apply to certain groups of people, nation, race or creed. It is unpredictable force, which occurs commonly. Produces the type of pressure that accompanies us constantly. Her feeling is guaranteed, as the presence of gravity in the universe. Coexists with us every day. Bursts often unexpectedly. Perhaps over the centuries remain indistinguishable, as micro-organisms in the form of spores. Threatening and dangerous, lurking in a formless mass. Lies in the recesses of our minds, sometimes explicit, if a person affected by it shall be filed with certain ailments to a doctor or psychologist. In a healthy body is the identification of errors or inaccuracies with pain, loss of something or someone, qualities, culture, living, education carried over from the home environment or practice. Neglected by its universality, as well as tame the tiger on a leash, fed pretenses. There is a man who is able to get rid of it. Emerges as the vast, deep well and pulls of everyday life all of us into the abyss of stupidity, intolerance, crime, horror, fear and other dark thoughts. Is a common manifestation of human helplessness, disability, limitations.

Sifting the paths of the imagination provides a unique emotion. Imagination can be upgraded by observing such unbridled power of nature, the events occurring around us, or the intensity of feelings or thoughts within us. You can impersonate well-known from everyday objects such as tree, although there is no hands, but you can write that "Away, moving his hands in despair or that sun sat on the roof or words floated like a weary traveler" Among other things, giving human characteristics to objects, phenomena, makes the imagination in motion. While still moving within the known phenomena.

Interests us Rung up the, Higher driving technique is the place where we want to create images or visions of the infinite apart from already-understood something. Even difficult to recognize as a fiction created for what may be likely. Renounce the temptation to attempt a definition of Imagination speculations ?

This can be the place to start bleed nothing fancy rein limited. But how to describe it? How to create your own language, written, spoken, or maybe the language sounds, images, or facial expressions? This is a difficult task for our brain limitations. And in that infinity can penetrate the voices of our ancestors? Maybe somewhere in our consciousness goes on light planes, and maybe there is another sense that our people is not given for life, embracing fluid formlessness another galaxy, prompting define something as not senses? How to speculate that at the same time not to fall into the arms of temptation ordinary deformations suggestive or dark?

Faith is an entirely separate issue. For the believer, although his idea is unimaginable area experiences and thoughts, believing it agrees to limit his imagination and wants to obey the restrictions. Gives some idea of himself, for example, the idea of God. Faith may be wrongly perceived from the pragmatic observer as something functional. Some examples: People need to create one's own need for a mythical world, because it relieves the pain after the loss of loved ones. Image of the world of souls is the discharge voltage, gives hope for life after death. Faith is needed even for consolation, for the same hope to extend the life after death. How sad existence would be and what would be the meaning of existence, if not faith in the world on the other side of life? Myths are needed, are balm for our souls, to help survive the difficult moments, still live with hope for tomorrow, the day after tomorrow, for eternity ? Psychological motivation be used for any subject, but nothing beyond the psychic entity, in this way can not be justified. This is how to change the subject. Realized by shifting attention from the object of interest, the psyche of the person concerned. Distinctive, contemporary trick. Turning to the excess, as well the ball on an inclined plane would meet the mental deviations physicist who watches it.

Finally, a topic that interests us primarily, toward which the intensifying further consideration is the speculative imagination. Indeed, it is the beginning and humanistic development of the accelerator. Inspired and enriched but completely different from the real imagination. It continued its development is both hope and fear. Is the highest, most important reflection that accompanies humanity. From it were born out of both religions and modern science.

## **I. IMAGINATION**

### **What's going on**

The reader or listener, anyone who keeps track of argument, reasoning, concepts or image, and finally some conclusions are expected. Patience of the student, his attention always tends to understand what the teacher concerned. You can leave implicitly, in the end no one provides all the effects, reactions and opportunities arise as a result of what he said. Association, the misunderstandings, the new variants, sometimes previously unknown mutations, emerging thought processes. The new ideas, time, circumstances arise sequel, the story is still unfinished, the river of words, language, thought and genes.

Who writes it is not fully aware of what makes, what he pushes and encourages that in general he grabbed the pen and opened his mouth. But the attempt to capture the awkwardness, depending on the perspective of the angle â?? Bent back?? (for someone or against someone), gives a word: perfect detachment. To see something you â?? To go beyond ?????, depart, look at the side, look at the top and inside, go to "?? kitchen? and â?? check instalacjeâ ??????. This is incorrect meddling has only one reason, which is harmful to try.

## **Paraphrase Philosophers**

Most written books we read, and probably not even if that happened, a large number of them probably do not us to taste. If a childhood that prompted us to study, it is doubtful whether do any kind of intellectual effort. The philosophers and their ideas is often similar, the majority of their views does not know or do not understand, and usually it does not necessarily write what we like. In addition, few leads us to ever learn from them.

Let's try out something about them not heavy mind at the same time, associating with something that we know today. We use a modification, a free discussion. Selecting a dozen philosophers scene short adverstain their attempt to present something to them distinctive. Using the richness of their thoughts and beliefs will try to find something distinctive, adapt it to today's mentality, indecently simplify the formula â?? Half-jokingly, half seriously ?????.

### Thales of Miletus, Anaximander's pupil, Anaksymanes, Democritus

Philosophers you imagine a whole on the basis of locality phenomena, such as a man risen from the fish. Already observe, however, that in nature nothing is lost only changing the form (the principle of conservation of matter â?? Energy). Motion is eternal. There is an infinite world and time. Elements of matter can be manipulated.

Do not know whether the world is ruled by the rationality or non-rationality. Looking for a final rule (arche) of all things, a proper existence, which underlies all phenomena (such key to any manipulation of the world). Still think that the earth is flat or cylindrical shape and is supported by air. The sun and stars move in circles and spheres, relatively close to Earth.

### Heraclitus

The same river you can not enter twice. The substance is constantly changing and there is in fact identical. After the death is not something you imagine.

### **Parmenides**

Being is one and continuous .... in its entirety.

### **Democritus**

World was not created by anyone. It consists of cells and hooked a vacuum. Worlds is infinite. Distinction between being and nonbeing or fullness and emptiness.

### **Leukippos**

Things are created from the bodies of the invisible, is not limited in terms of quantity and shape.

Their students have already talked about atoms.

### **Epicurus**

The world is made up of atoms by a blind force.

### **Aristotle**

Reality has the two characteristics: timeliness, or anything like what we see at any given time, as well as the potential opportunity to become something else.

### **Democritus and Plato**

Took up the subject of any sense of the term. The soul is a bodily and consists of the elements of fire, which are round. The soul is indivisible, does not have much force. It consists of two main parts: a rational and unreasonable.

### **Democritus and Epicurus**

The soul is corruptible and dies with the body. Should seek a causal explanation (the key to manipulate all). The senses deceive us, and we usually are far from reality and from the truth.

### **Socrates**

Notes evanescence subjective knowledge and conceit. Poets and artisans are endowed with abilities but can not justify either the capacity or to liberate themselves from the feeling that if one is not able to say that about many other things they know.

The problem is who is wise and who was stupid. What is the role of emotions, and the intellect.

### **Plato**

Should distinguish between the circumstances, that is what the senses tell us a real being, that something in the constant transformation of the phenomena is not changing. Philosophy frees man from the cave apparently leading him towards the sun of truth.

### **St. Augustine**

Evil is located in the order of the universe is the result of choice and free will of man bound the good smaller. God ultimately decides whether to come into contact with the man of God. This act is completely unpredictable, can not miss the most pious man, and fall suddenly to a finite sinner. God's grace is always a gift from God. People irrespective of their works are either chosen by God to do wrong, or good and none but God can not change that.

### **St. Thomas Aquinas**

Dogmas and the truths of faith are evident, however, you can justify them rationally. Rational methods of command is based on logic. You can make learning about God (theology).

### **I. Newton**

Have the same body, similar in nature on Earth and in space. Strength due to traffic. Way questioning the nature of influences on the answers, that is what we will investigate.

-

### **F. Bacon**

Philosophy is considered experimental and useful knowledge.

### **R. Descartes**

The truth must be carefully and tested in many ways. Everything should be divided into parts and describe the behavior of these particles. Thought should be carried out from simple to more complex statements. The analysis should include everything possible to not miss anything.

### **G.W. Leibniz**

Monad is something which is not part and can not be longer divide. Monads are the roots of things. Each is different because there is no identity. Monad has a number of modifications and relations, and the change is from within and shows itself. Complex things are made up of simple things. All are different.

**Julian Offray de xml: namespace prefix = st1 ns = "urn: schemas-microsoft-com: office: smarttags" /> La Mettrie**

Compares man to his best creations. The man is a machine but more complex. Its very flesh wound spring.

**John Locke**

At the beginning of the senses bring to mind the idea of a detailed, yet fill an empty room. Then they are placed in memory and receive the name. Mind is equipped with ideas and words of speech. We have innate and learned traits.

**David Hume**

The perception of weaker thoughts and ideas.

The perception of a strong senses, emotions and feelings.

Mathematical sciences explicit, clear and precise.

Metaphysics ambiguous and complex.

**G. Berkeley**

Our thoughts, feelings, ideas do not exist outside the mind. So we do not know for sure whether the houses, rivers, mountains, our bodies, etc. have real existence. Signal may come not from the real thing (eg, seeing things), not from the real world, but can be controlled from another source from God, and directly influence all our senses, creating the impression. For God is not omnipotent should be no problem.

**I. Kant**

Team events alive or inanimate world consists of enabling the implementation of a purpose, even if the individual phenomena or human actions are not dictated by the pursuit of that objective. For example, although the births, deaths and marriages, on which so much influenced by the will of the people do not seem to be any regularity, which would allow to anticipate the number, but statistics show that these events take place according to certain regularities. Individual people and even whole nations, do not realize that in pursuing its own objectives, each in their own interest, and often one against the other, undetected for themselves, guided by some

order of nature. Although the motives of human action can be low and unviable, this effect can be compatible with some unknown plan of nature, occurring outside the individually rational.

It should also distinguish between things in themselves, since only that which is conceived of things.

### **M. Szeler**

Man is a human animal.

### **R. Ingarden**

A man feels once the master of nature, and sometimes alienated and confused, forced to be independent of it, nature is. A man realizes the value and is their special charm. He forgets when the animal nature. Creative power of man is limited, always associated with the ground in real nature. Continually cross the boundaries of animality, grow more than themselves. The man mastered nature and animals but win does not exceed the limit of the new reality. He sees only her perspective, senses this new world. Currently, he is condemned to a tragic, lonely battle on the border of his animality, and just what is to come.

### **J.J. Rousseau**

We combine the social contract, obligation default between the authorities and people.

Many of the action pushes their vanity, pleasure of fame, fashion, or flattery a common taste. Geantly become valets have sovereignty. Live and act only for the world. What other philosopher, which exists only because it is the essence of a free and independent to the great and powerful. Only a moral being and free from any trade-offs may know the truth.

### **S. Kierkegaard, Huserl, Sartre**

My I is undefined, since it is no brain, no body, no state of mind. When I say that is my brain and my thinking does not equate themselves with the brain and thinking. So I do not know what it is I.

### **L. Wittgenstein**

Language is like a box of tools, which lie next to each other: a hammer, chisel, matches, nails and glue. Although so different, there are not arranged at random. Same language, which tricks us lobe can always surprise us. Verbal communication is often impaired. Meanwhile, we know the speech and language. We need to

properly maintain and distinguish logic denoting conformity with the reality of the characters, the mapping of our reality in mind.

### **Auguste Comte**

The man in the strict sense does not exist. Humanity can exist only because all their development in every respect we owe to society. Also important are the real objects and subjects of knowledge useful for achieving a secure and close.

### **Charles Darwin**

All beings are in constant relations of dependence, which do not relate only to living individuals, but also leaving behind children. Group of individuals that may have offspring with each other, classified as a species, are in course of time a large number of transformations. External circumstances in conjunction with the previously acquired characteristics, allow for the further successful development, or as a result of selection, to eliminate specific individuals, their groups or the whole species.

### **Arthur Schopenhauer**

Unfortunately, this important feature of life is the rule. Suffering is the closest, the direct purpose of life. Without it, our lives would be completely meaningless.

### **Friedrich Nietzsche**

Depravity of reason due to confusion between cause and effect. False causality is something without means. Mental results from the need to reduce something unknown. Any explanation is better than no time. Brings relief, calms, gives a feeling of power. Therefore, we need a false truth for the sake of a pleasant sense of inner peace of mind. This is our original sin, a significant obstacle to a better understanding of reality.

### **Henri Bergson**

Since the positive knowledge tells us what is and is speculative metaphysics, the fullness of knowledge of the whole thing, which allows the most extensive personal experience of real understanding in conjunction with the unknown that surrounds us, it is only our intuition. Intuitive approach emphasizes the importance of metaphysics, brings more to the science of metaphysics and metaphysics to learn more and yet not give up either of science or of metaphysics. A net of a comprehensive combined expertise lies in our consciousness in the form of personal intuition.

### **J.G. Fichte**

Time is something internal, there is in our soul. World, which was created by an act presents to us as the spatial and has a fixed past, present and future. The movement takes place within us through time, like moving the needle on old recorded disc. We participate in something that has a fixed structure and is only played, like CD.

### **G.W.F. Hegel**

Getting to know the opposite. First, we find something (thesis), then this denying (the antithesis) to finally pick out the essential elements from both of these points looks and come to a collision (fusion). So true Lies in the middle of ?

### **Edmund Hesserl**

Obstacle to knowledge is our current habits of thought. If you disable these habits, and discover psychological barrier of thought, gain access to a whole new horizon of knowledge. If a new mental attitude in the knowledge. Method  
Phenomenological reduction through knowledge of psychology, will reach the horizon Transcendental purified phenomena. To learn more aptly, we must get rid of or take into account the psychological factors inherent in our consciousness, which come to us aside from the right course and away from the road to truth.

### **Sigmund Freud**

A human being is made up of something that we inherit not only the ancestors but throughout Nature, which is called an ID. The process of education and the impact of external stimuli, arises a superstructure of the ID, which is called the superego. We ourselves mentally (I am EGO), we are at the border, at the interface ID and superego.

### **H. Hesse**

A man too proud, too independent, strong, simple character, achieves a freedom that becomes a burden, loneliness and suffering the disease of curiosity brought him to fate. Such people have an important social role, opening up a specific mood and have the courage to jump in the universe and to look into the chaos of his own soul. The image of people who genuinely and consistently these features is a fiction but it allows you to imagine the combination of multiple features, which are usually ascribed to many people in one individual man. Fear arises whether a man so constructed shall not be deemed insane, and a reflection of the complexity of human nature.

### **Karl Jaspers**

Getting to know the truth of the border situation, knowledge is too superficial. Border situations is now being, death, suffering, struggle, guilt, the awareness of existence.

## **Jean-Paul Sartre**

Man is not created by God or not preceded by the creation or appearance of the world, a plan, or the essence of things. First, there is a man of his existence, and it shapes and determines the definition of its nature or for which a plan was made. Man is what will make himself both at the individual and of present, as well as historically and in relation to all mankind. Weighed down by the responsibility model, which will have an impact on other people.

## **M. Heidegger**

Asks not what is man, objects, Earth & Space, or God, but what is "? Knitting network ? It seems that all be going toward death. Our existence depends on the quality of venue for something, the quality of our state of consciousness, for example, being in fear, being a gossip, or other being, some better, more interesting, more complete.

## **E. Levinas**

Everything we do not know what is beyond our reach, somewhere in the beyond, in transcendent, at infinity, all you can imagine as a BYT. If the BYT is FACE, even without words the conversation going. All the time shows the relationship face to face, between us and the face of such a being, as well as between our face, and face another human being.

# **WORLD GLOBAL AND LOCAL**

Assume that we do not see any significant obstacles to consider both our scientific and metaphysical outlook on the world, gathered together all the fruits of mankind in the form of the development of science and technology (culture), broadly understood, as only a local form of existence and BEING. We can all look even wider, to see something beyond or above the combined scientific method and metaphysics. This is the real world, whose nature we do not know which is similar to our world, and which may be so BIG and Large that easily can accommodate all of our ideas, they can really achieve, duplicate and multiply in huge numbers, with the subtle differences between individual copies, or without them. There is no reason we could not imagine how, for example, every second, millisecond, or every time the smallest cargo is stored, as well as diverge from each other all the possible options for implementation. There is no reason that the world can not really operate entities that came to anyone's head, and even that these entities were not incomparably more, and they form an increasingly moved away from our values.

Simply, not even talking about infinity imagine something similar to what we know and what is a stop, while the world can be OPEN and GLOBAL. Open, or go beyond our notions of him, and global, as easily as a whole covers everything you ever imagine yourself with him, because we are part of the whole. At the same time we fully more bigger smarter, wiser, larger, more diversified, more stable, so wondrously

Our world is the result of a local Global World. Not even his reflection, but merely a reflection of the local resultant. Under this assumption, we can easily manipulate, and the Doctrine of Metaphysics, using Kula Imagination, Motherland views. Considered the possibility of the imagination or the imagination of All Humanity as a relevant to our world manifestation of the Global World. We can examine our own, the human imagination in all its forms, is not treating these symptoms antagonistically, to find regularities, similarities and differences, be it all chosen by us, including scientific review, then accept that it is in some significant relationship to reality.

## **CIRCLE OF IMAGINATION**

Taking all the ideas that humanity constructed without any detailed analysis, in its entire history of mankind, in all its forms, forms of writing, recording, get a set of extremely rich and diverse. But as in digital technology, we are shocked when originally calculated amount of information in bits, KB, MB, GB, speed of transmission, for example, when the Internet goes networks around the globe to reach in fractions of seconds until a neighbor behind the wall, and which is the technique after a while and it gets used to understand so in the human imagination is a certain order and the possibility that we see the end. After a systematic effort, to find the characteristic points and attempt to define the types of imagination, and their functions, appears in the picture that we can close in a certain area. Assume that it will form a ball.

The ball is constantly growing, both during the historical development and individual human development from childhood to the end of life. Child, not understanding the force of gravity, notes with surprise: no I understand that those people who are at the top

ball (Northern hemisphere), they did not fall, but how is it possible that do not fall those at the bottom, yet they go upside down All of us lived, and still we are met, a further revelation, when suddenly we begin to understand something. Jump, and now our imaginations work differently, the ball is increased.

## **BORDERS OF CIRCLE**

The sphere of imagination has its boundary surface. Increasing to enter into contact with the area, which is outside of it. The sphere is expanding, it increases its surface area, and thereby outdoor area, which adjoins. When the boundaries

imagination steadily increasing slowly, and the imagination itself was not impressive in size, the size of the border and what is outside, not very important. Today, however, if these limits are expanding at an accelerated pace, the area outside has become increasingly important. We begin to realize that our imagination is to brake something in an unusual wealth is right behind her.

So let's take a look at this as we create new models at the level of abstraction and how to "Lean nose", "Look through the hole from key", bit beyond the current limits. For example, will present two models: Model overall and "model Worlds transcendent". We look beyond the vision of Miniaturized humanity and "network all possibilities".

## **ENTIRE**

The whole can be understood as the incorporation of some well-known elements together and create a coherent system. This whole off everything different. In the whole of mutually determine. Reality divided into terms that are mutually restricted, it creates a whole through the division.

However, you can understand the whole contrast. When it becomes the sum of all entities, relationships, and other metaphysical. However, no numerical sum, but something that coincides. Except that it does not need to specify the co-pending, for some time. This is the whole relationship, the transcendental and metaphysical aspects unknown to us, including reality, even the Non-Reality", if one was in relation transcendent. Everything in this whole time, and without his account, and any relationships without relations, reality and metaphysical Other. This is something that covers well-known horizon, the relationship face to face

with the Unknown, infinity, transcendence, metaphysics, and something I did not even dimly.

The whole is aware of this fact of life, something untouchable, like identical.

## **CONSEQUENCES OF A WHOLE idea of**

This whole thing is an abstract construction of a permanent and unchanging. It consists of elements which need not be permanent and unchanging. Understanding the structure allows us to use, manipulate variable factors to find a better location for the Whole. We can not rule out anything because perhaps we can see all the essential elements and can use this knowledge to better our position in the Whole. Location is not only the importance of space-time, but it affects all aspects of the Whole. With all hope floats that are part of the medley, but durable. We do not know and do not know how to learn this lesson. This does not mean that we should fall into some pessimism or lose faith. Nothing like the more that we do not know what the factors are our better location in the Whole. On the basis of Right-left, as when moving too heavy and large wardrobe, props in the quest of spiritual values on the one hand, optimism, higher feelings and positive emotions, on the other hand, rational knowledge and its application. It may be that these two props and the method of Right-left, is insufficient and inefficient effort. Guided by this suspicion, born of a suggestion to extend the network of assumptions, expand the possibilities of our imagination and see what we can, and the rest evidence.

Changing the location of the Whole does not necessarily mean the space or time, but they can better understand our spacetime, the quicker we go out and learn outside the other sighting. Recorded in the New Testament concept of fishing survival us as our good qualities, and the destruction of that in us wrong and do not fit into the life â?? ???? , Future in heaven , waiting for us, difference is a simple example of imagination, for that difference, not only of time and space, re-locating.

## **A WHOLE GOD**

According to the Integral vision, God is the constant, stable and relatively unchanging element. Has an important relationship with us, the entire Humanity. The idea of God in himself while many natural and constantly conscious of needs and perceptions, including feelings, emotions and values, in particular:

- awareness of birth and death,
- sense when it is all very well that we will live forever,
- our loving relationships with other people close to us, even after their death,
- awareness of our world and stay on it,
- physical and psychological needs, including the neutralization of threats,
- self-esteem, both for us and for the world.

## **ROUTE**

ENTIRE is infinite, though not exaggerate how it will in the future. Recognizing reality, combining elements of "I am who knows and REALITY, what you recognize. We act as some abstract understood tools, our thinking in this reality, but two (at least two) distinct line something distinctive. There are usually two contradictions, such as determinism and freedom, materialism and idealism, up and down, etc. By using the same Vision of reality ? we acquire orientation. We can also see a space between these lines and some interesting see or beyond. We then say that not everything is white or black, and that every rule has exceptions. But the majority recognizes only these two lines, often by assigning one of them a value, feelings, or favorable / unfavorable ratio emotional. It is also characteristic for our cognition. Ongoing disputes over the centuries that the Line ? is correct and that only an our imagination ? Meanwhile, these lines indicate HUMAN WAY. We walk her, according to orientate it, and rather reluctant to go out beyond its shores. Slowly, however, we see that these roads are more, not

is not easy to come or go from our past. However, we do so, although the future then it will be even more puzzling from the past.

## **IDEA absolute SHADOW**

In relation to any ideas we can find something similar to the shade. It's also kind of ideas, often seen as its opposite extreme, which, after careful consideration, the basic idea is very similar. These ideas behave similarly to the double negation in logic, for example, is not true that they do not read this content, means that you are reading it. Shadow ideas are well-known dilemmas such as rationalism, empiricism, realism, instrumentalism, idealism, materialism, etc. For example, instrumentalism is that studied by us the truth, it only compounds the instrument known phenomena. However, the consistent application of this principle leads to the correct instruments, the theory-tool gives the expected effect-instrument, and the false instruments, when this does not happen. Realist immediately assumes that it knows what is really exist or not exist. To misunderstandings, disputes and thus bring in reasoning inconsistent, both the realists and instrumentalists. This happens when the instrumentalist establishes the principle that everything observed is partly real and partly instrumental. Then there are the arguments in question, giving the impression of conflict of ideas. Meanwhile, all the ideas are a reflection of absolute shadow right and true, but unnecessarily complicated reasoning, as well as use of double negatives at the beginning of each sentence.

Absolute shadow ideas are useful, because a representative from each stream of thought has always lend themselves to a certain drift of external factors: political, financial, religious or social, and cease to be consistent within its own system of reasoning. Then the behavior of the native markets, restores them to life. In this way, the materialists stimulated idealists, realists and empiricists instrumentalists rationalists. Interactions follow it in the opposite direction and due to lack of consistency side other ? In the end, as peddlers during a quarrel, no one wants to have to admit mistakes and progression of their mutual dislike, and dishonesty, has a global adventure among the most respectable people in the world.

Meanwhile, disputes are sterile, because every idea and its shadow is absolutely true. This truth is apparent from the reflection of ignorance. Ignorance will always exceed the capacity of knowledge, and sincere confession of awareness of its limits offends no one. We do not know whether the world is real or an instrumental or materialistic or idealistic, and whether we know through reason and empiricism. Happiest seem to combine ideas and shades, in a total metaidea, allowing dualistic, more balanced outlook on reality. This allows for being inconsistent in his reasoning, while the full consequence. In fact, I reason as such instrumentalism instrumentalist, the realism but as a realist I accept the inconsistency, while allowing for both reasoning as valid. Such contradictions, though seem to be unacceptable on the basis of simple empiricism are fully justified in the area detached from her abstraction. Because truth is not in the middle or at either page but in an area approved by our imagination (for example, in several places at once, or for example in an area where it is fuzzy). The truth need not be a point but may stain or space.

# WORLD WYGLUPKÓW And BEZWOLKÓW

When we leave the ball of the Imagination, or if so we think we can get to the World Wyglupków (STIUPID-COMIC). There, everyone does what he wants, and the world changed around according to his will. All that dead things, plants, animals or people, take any form, according to the wishes of those who focus their attention and immediately adjust to his will. Conflicts could arise because intentions individual specimens, there are certain hierarchies operating simultaneously and seamlessly:

1. At the highest level, will be implemented according to priority, first come, first think of this intention will be realized;
2. On the top floor, followed by separation of the same thing among many who are just focused on her attention;
3. At the highest level, divide the whole world, and everybody can get everything to its exclusive use (which means that no one really suffers because it automatically jump to any number of worlds in which it is safe and where it does not manipulate anyone and everyone is in any number of mimeographed);

Transition between the levels shall be automatically each collision is then immediately distributed, and the conflict can never occur. Potential threats are lifted by an increasing part of reality, to separate the whole world of exclusivity and automatic return to lower levels, where the focus is not simultaneous. At the same time, everyone is assured of being and security at the highest level, which may return to lower levels.

To realize that words and concepts are the products of the imagination created by strictly delineated additional assumptions, you can use the abstract concept of Force field ? Let the force field is a form of clear energy, which can take arbitrary but determined by the shape of someone. This field, operated according to our thoughts and our desires, takes form and expression, according to our will. To create a space create a realistic prospect of landscape that resembles the illusion of a true nature. To bring home enough that this field took the form of walls, doors, windows, roof and floor. Created furniture, books, dishes, ornaments, lighting. Flexible steering gives the possibility to change shapes, forms, functions and functions of these objects. A chair may be freely interchanged in the table, a TV in a sofa, and these in turn again in the chair or other object. With this idea, blurring the boundaries of meaning. Square circle is really possible, because there is a form of energy. Energy, which is located in a recorded information on many

large, clear, flexible and variable that takes different forms of modified and fulfills different functions interchangeably. This notion, although born in science fiction, let us understand that the names which we use are not definitive, their possible application that you can imagine the reality is subject to change, a full hybrid solutions, with related, changing functions. This is called the World, World Wygłupków.

On the other hand kept thinking we could imagine someone constantly World subordinate, passive. The World, World Bezwolków (WITHOUTEXPRETIIONS) is right next to us. Now do not be surprised reaction of indignation, grumble, hear disapproval. Pervasive and widespread aggression? Intolerance? Someone picked up the freedom of thought? This is nonsense, untrue and imaginary insinuations. I therefore encourage the self-analysis. Yes, we allow others to express certain views, but only some, in certain areas. Beyond them is a huge territory in which we are closed and not allow it. We all know the arguments of a kind: it is not proper, it is unethical, crap, bonehead, never to do so I disagree, what people say you can talk to senior, bore, I do not have the time, as you do not want you to know, etc. etc. .. Honestly admit, this is not possible that any of us could think freely, to imagine something else, and thus all and sundry to proclaim their views, without exposing itself to any danger.

Gregarious behavior is not atavism. We can not hide them to rest. What makes us different from apes is, among other things, the ability of coordinated team. In accordance with such rules exist various organizations. For organizations within certain structures and maintaining the hierarchy. In the armed forces to guarantee security and independence requirements of concern to citizens and soldiers. The obligation includes the dedication, loyalty and total submission. Group of researchers also act similarly. Create a creative environment, with its customs, ethics, and priorities recognized mentors. They are hermetically sealed BORN new legions of loyal FREETHINKINGMAN ?

Let us focus on two factors: aggressive units and loyalty to the group. Politicians and leaders, they all behave similarly. If anyone does not share their views, be treated as the enemy. Even the more aggressive members of the family, destroying family and friends, they are not subordinated or limited in their willingness to express wrong ideas ? When this does not permanent silence. Anyone who violates the ban, in extreme cases, can be excluded or continuously harassed and persecuted. At the same time in case of subordination to an immediate reward, acceptance, support, and even defense. In some cases, the attitude of complete dedication and devotion. Who can resist such a dictum, that sort of dog training which we are subjected from childhood throughout life? The rules are so obvious and common that we forget about their existence. Whoever thinks of the breathing air? Unable to resist, assimilated. Themselves begin to act like the others, we become aggressive, impulsive, determined, or just more consistent. Our rewards and punishments we give away involuntarily, without further reflection, often relate

to matters of minor, everyday, for example, forms of behavior. Sometimes ridiculed, and another time eyebrows. Sometimes crying, sometimes we're just sad. These our acceptance or lack thereof have an overall effect on the whole personality of another human being, his thinking, emotions, feelings, and finally ready to build the structure. We have a second, next, similar to us WITHOUT EXPRESSING individual. We are pleased that we understand, interact, like, We're friends, and love. Well, who would it eventually had to disturb? This results in World Bezwolków.

Someone may say, well, as usual, the truth is somewhere in between. But it's not quite the only explanation. We conduct our reasoning differently, by suspending them in between, as well as giving you the chance to further explanations spaces without closing them, without tying up the only legitimate but chosen by giving the movement of our mind in which all the reasoning will be only successive landmarks for learning, and the truth will be flight, looking at these points and the search for the next, similar landmarks. Thinking this would be an alternative.

Bezwolków world is infinitely great and large network of various potential routes combined in space and any feelings, including thoughts. They ordered their order and logic in accordance with which the world is inanimate and animated in space, and precedes it "? As the eye can see ? a story, waiting for some future in livid away ? In the meantime, feel alternately precede or follow my thoughts, and they are not always linked in a consistent combination of actions or events.

In this world we are moving on the road, a diversified network of alternative possibilities, and because at each intersection of different choices is a momentary stop and swing: "?? Right, left, ????", the final position-choose one of the paths gives sense of free will and conscious choice.

World Wyglupków and Bezwolków not mutually exclusive. Both the World Wyglupków may arise according to the will of someone else's world Bezwolków, but only for those who so wished, and in the world Bezwolków may be determined by a network of roads gives a sense of the World Wyglupków. Thus, an observer inside the dilemma that it is in this or that world can never be definitely settled.

World Bezwolków and Wyglupków is an illustration of a limited capacity of our imagination. It also, and all our senses and mental functions, helps us in the interaction with the outside world, only to some extent. Hence, the knowledge should not be based on any one method, one way of thinking, one ideology or philosophy. Only their combination and multiple offers, as well as network with half the fish more opportunity to better understand ? significant number of properties of the surrounding world, although this relationship with him that we understand.

Our individual senses and intellectual functions can be compared to the ball, lying side by side on a flat surface, which is the Real World. Each of the senses or any of the intellectual functions (each of the balls), only a certain small area come into contact with the surface, where it feels best. The farther from the point of contact, much less agree not connected with the surface, this ball, the sense or mind. By contrast, each of the balls something about this (area) really knows and understands their own way. Value of each is similar, provided that it is not overrated, do not we expand the meaning beyond the actual possibilities. Our wealth is the use of the multiplicity of experiences, complementary nature of knowledge from different sources. Key in this is to maintain a sense of proportion with their use.

## **Innovation and Traditionalism**

Originality, inventing something new, the cognitive shock, shock associated with the need to neutralize it and adapt to what is new, these are circumstances that dramatically affect our understanding and to show that a significant unpredictability of the future. Therefore, we know something new in within a specific scientific paradigm but we are not able to predict how much different will the new paradigm, or even whether it will be any paradigm. Indeed, the intensity of news can get out of the existing terminology and any predictions. To

illustrate this, imagine a man who lives only to eat cheesecakes. Man who like cake meets someone and he explained that one: opium is the cheesecake, which has no cheese, instead, is something else. Imagine that our cheesecakeman ? has a great imagination, and when he ate opium found that almost one imagined its taste. However, it would be difficult to expect of him for anyone to explain to him what it tastes like cabbage and dried mushrooms, with the addition of dried plums. And it is through the development of science trying to make something like this. We should opt for a multi-search, without defining and identifying what is expected to chart a forward-looking.

## **THE STORY OF many dimensions**

Proposed consistently imagining the many dimensions (many others, and important as the dimensions, characteristics of reality) might look like. We live in a world primary (this is the conventional view, since none of the Worlds is not

essential, but the idea has to start from something), which looks similar to known Einstein's imagination. Arose from BIGBANG and contains spacetime, which expands. However, if we add another dimension, that will see time as an extra dimension, and alongside it another, it will be the perspective in which the entire spacetime, will look like a solid construction. Such a notion known from drawings like cylinder, cone, cup, or rugby ball. The drawings of these two or three dimensions is shown with one dimension. On such a conception of space-time graphics, individual human life should be expressed in the form of a drawing or a spiral spring set vertically. This image would be motionless, because from the perspective of the fifth dimension of spacetime is fixed and determined. To imagine some movement would add another dimension. For simplicity, assume that we draw a second, identical to our spacetime, the picture is slightly different from ours. Now let us add another, slightly different from each others Universum. Write of them on transparencies and translucent Let us together, so that the boundary limits of the overlap. Imagine it yourself that this complex is extremely stable structure, not to move, impossible to break or any modifications. If you have a body which, like distinguishing between the eye movement in space, he sees this structure. So can we start to imagine a new, multidimensional picture.

## **THE STORY OF THE DIMENSION OF MOVEMENT**

Durable construction very large number of dimensions?? Recalls maze opportunities, which as a Ariadne's thread is moving our actual existence, guided in a way not to predict, as the way to embrace only the current episode as threads ? We will. To leave the safe the story of many dimensions, there would have to move, dimensions, something that transcends multiple dimensions. That could all change at the same time a number of dimensions. Such traffic, show the place where we know how to preserve its existence, would have to take a short time and allow for accurate return, in another case by issuing of total helplessness, until the art of survival in the new land.

We stick, according to his will, in a narrow image of the large number of dimensions, enjoy the security of its structure and believe in the way we lead our lost threads ? Our entire existence, beliefs and knowledge, would seem to fit in this idea. But there is something more, the way the selection difficult and dangerous,

the search for the true Promised Land. Although this Story ? seems to be fantasy, it is as real as everything that surrounds us. Dimensional movement would enter the path to building individual stories about the many dimensions, for example, eternal life in hooked-time or permanent structure of the intended event horizon. From this perspective, our world and existence, become the cradle of spontaneous events of life, the womb of nature, which so far has not delivered us the world, holds in his arms and slowly learns how difficult it is to create something that will give us true life.

Since our past is not just history, the event actually occurred, the fate that has passed, but very numerous, different, unrealized potential events or possibilities for understanding ourselves and understanding the world, which no longer possess, and our future is not only what we really meet, but also theoretically and practically a constantly open problem, growing beyond us and our inability to strength. In this case, the dimensions of this mass, which we do not know, and after which, if such a move was possible, hike would be just as unusual and kind of outside the space which gives an idea and insight of a much wider horizon of possibilities, allowing insight into a new Array world. Even unattainable, is an attractive lure, inspire imagination and intellect. The notion that infinite net roads, it is but does not happen, illuminates the kind of wandering point after the network, run a driving force and free will. This point is seen as has not only the material world but the spiritual dimension, inherently associated with site and moving dimensions. Indeed, the dimensions of the movement takes place, and we participate in it, the challenge is that in order to manipulate the movement.

## **THRESHOLD OF IMAGINATION**

In general, real world oppose our fantastic visions, dreams, fables and fairytales. We believe that what is real and making our influence, as known and knowable, it is more important than that which is beyond the possibilities of the world sci-fi fantasy, confusion and hallucinations of ill. Meanwhile, the latter reveals to us the true nature of being, reaching for the remote, deep layers of inexhaustible wealth of possibilities. Already losing the possibility of hundreds of factors, being burdened with information overload of modern civilization, as it were not remember, that a true and real world, brings with it countless amounts of data, something that goes far beyond our human perception. We no greater mistake to assume that everything you are able to imagine is nothing significant shadow of what it's real, though unknown to us the world is possible. We still do not naively think that our ability to know beyond any Local Jurisdiction of the Entire World. Although we should be aware that there is an entire, that it is wrong to believe that

the approaching of the Whole. This is not possible, always remain in a locality that does not mean that we do not get a refinement of and respect for the Whole for its size and power. Manifestation of this can be flexible imagination, and further ideas, and freedom of intellectual activity. Such knowledge of the threshold of imagination and its tedious move on, it is the truth about our world.

## **A bold hypothesis IMAGINATION**

We can say that the hypothesis is a bold if it is unlikely in light of the general background knowledge of the period in the development of science. But how do you take such a bold hypothesis, and why some have them, while others focus their attention on the already well-known? Certainly plays a major role imagination. Is the area we know of imagination, even the most fantastic. When we listen to stories, watching images or sculptures, listen to music and develop your intellect, or learning to work, it is still developing and shaping our imagination. However, there is a fundamental difference between persistence in the area known to us and the general public, known ideas, and leaving out the area and searching for new, modified forms or imaginative layouts. In the latter case, giving up a truly creative endeavor, we enter into areas unknown to us fantasy combined with realism. We begin to assume the existence of something that does not fit into the existing patterns of thought adopted. Bold hypotheses are the result of unbridled, liberated, but controlled imagination of those whose intellectual courage has freed itself from the pressures that surround us evocative community groups or entire societies. This is the result of intellectual rebellion, a desire to play and confidence in himself, kind of activity in isolation and loneliness of the mind.

## **QUESTIONS ARE THE ANSWERS FROM MAJOR**

When we consider the image that everything is and we do not find a solution, we begin to understand that we reach beyond certain boundaries, which delimit the possibilities of our knowledge. Then we begin to create what he might be there and how something can connect with us and with what seems to be known. When you create has a number of such ideas, will be treated antagonistically, as overlapping conflicts, either as a grid, matrix, charts, not mutually exclusive concepts. This raises the question of whether this something unknown to something we can only surmise by the affirmative sentences? And can stimulate our imagination will serve as good questions, puzzles, interjections, or

incidental irony clumps of words or pictures? Let's try to ask yourself a few questions and let them answer will not be provided a better understanding of what we tried to imagine.

1.) Is our existence worth taking seriously? Is it something serious, or whether the similarity of sleep followed by awakening and somewhere in there, only the gravity we feel? Or is it a dream multi-level and at the next level of awakening more and more seriously we treat him?

2.) Are our people, whether we as actors are not object of someone's conscious manipulation? Is compels us, to nature and the world, case, or concealed for this thought, consciousness and the ability to control and use? And it is not about determinism and indeterminism but the suspicion that such plant or other item, whether or not an unknown fact, does not direct us?

Ironically, most directed toward the people, they always imperfect, fallible and ridicule, and are particularly vulnerable to this kind of form of the name. So let us try their history, in the alternative and without priority of any of them, described as:

1.) And endless sequence of events resulting from their stupidity.

2.) Treated as in prisons, with suspicion, especially winning, enjoying, having profits as potential organizers of the events that led to success, us stop believing in imaginary cases, and trust an unknown intelligence the organizer, so cunning that it always remains in hiding, because otherwise everything would be issued, and the whole conspiracy and deceit would be unnecessary.

3.) Different philosophies we see like as forms of existence in the Universe, during the flight, in a sleep state of our senses. Something along the lines of today's virtual reality, which is given to us in time, until we reach the end, no matter what is the purpose and where to find it. Philosophies describe only what the solution will consist, as the device is constructed by which manages to create an artificial reality, in fact, a coherent but false world, who finally reject and which has only a cognitive function, preparing for the time ??? After waking up? ?.

4.) We see all theories and all intellectual activity, including going beyond the known and the world described by science, as a manifestation of mental ailments, a kind of paranoia, a form to maintain a balance by reason of its mental or physical defects. Scientific knowledge as intrusive, a form of coercion, the imperative of loss and helplessness, outstretched hand sinking in a swamp, a false trail of nature, a closed street, wanting to save something doomed to extinction.

5.) Imagine the world as the movie has already recorded, registered and established for ever information that is synchronized to at least two paths, physical and spiritual. Our life is a reproduction of the information, and spirituality is usually slightly ahead of physicality. Therefore, we think of something first, then we do, but need not be so always. This film is played as such information user views or warning, for the higher forms of existence.

## **II. METAPHYSIC**

### **BUT Overall IS WORLD transcendent**

In addition to the World The overall concept can be imagine a world-transcendent and dissimilar. Is then filled dissimilar Worlds, the transition to them is difficult or impossible, in every original world, and there is a different communication with other worlds, at least that communication is really difficult. The man with the mind-educated in a particular environment, and historical considerations, it has no capability or has it just possibly, the perception, perception in relation to those of other Worlds. Brain, the mind rejects these other structures and effects, since they are so dissimilar to what a man, a creature of nature, know and understand that the perception does not allow collection of such diverse information. Comprehensive exercises and any possible manipulation of, entities in the imagination, it can only create opportunities for future contact, communicate with other worlds.

### **PROBLEM of NONMATERIAL**

The concept of matter is understood very broadly. If in the past, one could imagine that emptiness, air, vacuum, thinking, feeling, etc. are features indicating the intangibility, it is now we know that everywhere pervades some materials. Work force, energy fields, information flows, there are certain correlations, have a mutual influence with what we consider traditional matter. Finally, it is difficult to imagine that there is something that is not material. Conceptually NONMATERIAL runs out of sensible and clear definition. Come as a result of the conclusion that everything we know or imagine, or what we believe, is with us in some impact. This fact alone begins to prejudge the materiality of the World and the whole of Reality. Nonmaterial becomes an illusion, atavism, forgotten knowledge about ghosts, angels or gods.

Please note that calls to other attributes of matter. Because the scientific knowledge is so important to the repeatability, the intellect begins to reach to determine whether this must always be whether the occurrence and regularity of rights is a universal feature of the constant attribute everything that surrounds us. Can there be something important regarding the investigation and support? What eludes observation can not be included in the scores, do not even want to obey even a random probability calculus? Is Entirety and Infinity, known and unknown world, we humans and everything related to the most subtle human feelings, if all this is potentially subject to some principle, or sometimes slips away, like forever enchanted cryptographic cipher, not giving up more, fleeing and mysterious a demon, perhaps even the material, but the unknowable?

## IMPLICATIONS TRANSCENDENT of FREEDOM

Let's look at the world, as in a whole, and our thinking about it as something for the World adequate but not necessarily true. Moreover, when we see it across the unpredictability, wealth of possibilities beyond our current imagination, we can provide sample images of the effects of such a view:

The problem is not how the universe is, but how to use it for us, as it manipulation, where, at any place of his wealth he will allow us to do with the fact that ??? Manipulation is interpreted broadly, actively and passively (eg, the latter is subordinate to the dictates of the divine and gain merit for eternal life). Finally, the question is always that we came to, on some basis, which may not be easy.

We do not know of the universe directly but through the Parable?? or models. We have no other possibility, which does not mean that this picture is wrong. It is most appropriate, as it seems only possible. In any event, relentless commitment, and no one, no one urges that these efforts to cancel or weaken them.

Ways to manipulate it is more and more. Not only through knowledge that is developing, but we realize that the answers may come from parties with which it previously did not expect them, eg children, the sick, artists, philosophers, from the humanities in relation to science, with a narrow discipline, etc.

Manipulation can alter or destroy the forms known to us not only to biological life but the existence of our universe as we know it and replace creations ??? Genetic engineering?? or ??? physical transformation in the macro scale ????. Hardly any damage occurs, and only lounly, specific hatch from the framework of spacetime.

Change our perception and awareness, and manipulation may affect subsequent forms of existence, seeing the future and the past as a sustainable mode, turning the other dimensions and the creation of new life, understood as the determination to "?? Higher level ????", and also the emergence of other determinants, have not known or not appreciated.

You will be getting to know new, difficult threats, such as loops or nightmares in real time perception, which influence the regularity of the already known growing number of diseases such as mental, is currently being observed.

Rise to the possibility of the emergence of new biological species, artificial or natural way of change, staying in isolation, manipulation in the areas of time, etc.

There will be exploration of unknown or supplement and enrich any possibility of increasing optimism, maintaining a comprehensive physical and mental balance and the possibility of survival and development, despite the expected changes, such as known will form a more Direct contact with an unknown ?, other forms the past or the future, other creatures, which are so far only in the imagination.

This will be the use of creative energy resources, some basic elements of matter components, storage and activating consciousness.

At the end gives rise to the reflection that, if the total does not check the above ideas will have to come New and again open a door in an even more unpredictable than the outlined concept.

Should not be subjected to a simple suggestion presented factual existence of entities but used this way, exercises imagination to expand and view the world in its rich complexity. The image may not be true, but looking to use the model of giving. The truth is present, but what we create People must always be treated seriously and with a light at the same time HEROS. On the principle that something funny may not be stupid.

Knowledge in this form â?? Slips network?? from the disciplined framework of criticism and revision but not with the latter, but regardless of that, they are not destroyed, but only show new areas under review criticized the model of vision or something. Logic, the principles of reasoning, our language, are all just models, tools, knowledge of reality, and even the word is true also such a model.

## **CAPACITY CALL BY POTENTIAL IMPACTS Non-local**

A man may be the result of some local factors, then its characteristics are determined by those giving up, at least potentially, to know the factors shaping the structure and behavior. Assuming the impact of its entirety, or at least part of its non-local factors, we can imagine humanity as potentially able to control the world capable of local or beyond this world. If who we are, not necessarily longer, and now, our options are not fully knowable in a short time. Then There is nothing hidden that would not be show. Appears to us as a long-term process to the full cognitive capacity. If you participate in such a process, it is not recognizable to us

whether we know the external world or our increasing, given to us earlier, stimulated by the potential factors nonlokal.

If we assume the latter solution as possible, the whole process in which we participate is to target the grasping of the World Local and exit, and mastering the elements nonlokal Whole. There is nothing in this pessimistic vision, limiting us, or determination with regard to the man himself. Potential non-local capabilities may allow the operation of all higher human values and needs, which are about humanity. Potential non-local factors are then provided their practical existence. Form of the ability to change with the change of Local Reality or leaving. The realization of their existence, allows the patient, although not passive, waiting for appropriate solutions within the Process ????

## **CROSSING depths of what unobservable**

Known thesis that science does not provide any means of crossing the gap between what is observable and what is unobservable. It seems that the argument is too conservative. Yes, we do not have direct access to what is unobservable, but when I arose the concept of an atom or electron, or when the periodic table, there is empty space on the unknown elements, whose properties could guess, is, after all, albeit in an approximate manner, obtained insight into what is unobservable. Similarly, the history of science itself, through the discovery of previously unknown truths, points to the possibility of observing what was previously unobservable. Construction of microscopes and telescopes are the perfect example. The same word: unobservable-testifies to the awareness of the something beyond what is observable. Awareness of this remote and often referred to as intuitive or metaphysical. Science thus provides a way to cross this divide and uses here:

- analogy to what is observable,
- finding the elements or functions which coincide with the observable
- creating simulations and projections going from what to what is observable, unobservable,

free, as far as it allows the image of Humanity, manipulating what is observable and unobservable predictions to make, to create new images and explanations.

## **Commutativity transcendent**

When go out our imagination, to a specific limit of our possibilities, it seems that there is nothing beyond the imagination. We feel the current limit opportunities across the globe imagination and humanity, or fall into the possession of “focus in I” any actual knowledge or create a model that goes beyond the imagination of the concrete, such as the World Transcendent. The relationship between those two worlds is not specified. When we look at it from the particulars of any ideas beyond those limits appear to be in a group of cases from the different variations of the absurdities of divinity, and all are either unlikely speculation or belief in the existence of something. When, on the contrary, we look to the World Transcendent or another of the group Abstraction beyond designata, the world of the imagination of a particular subject is just one variable, one of many possibilities of the Great Mother of emerging ideas. Thus, World Concrete can be seen directly, that is real and probably also through the prism of All Imagination, as a condition of temporary and uncertain. At the same time designata world outside may be linked directly and closely with the real or from the detached, multi-threaded, Array, speculative risky and the only likely or more or less feasible.

#### Concrete real Related to Transcendence

We're used to this dichotomy between the reality of World specific and related Transcendence. Meanwhile, you can include all other possibilities:

#### Concrete real Probably Matrix

#### Instantaneous - Uncertain Related to Transcendence

#### Instantaneous Uncertain Probably Matrix

Concrete Reality is a strong suggestion, imposes through everyday experience and the need for optimism, as the psychic energy for everyday activities, determines the first choice. If, however, fly to outside and liberate it from these factors, and other approaches have also become peers.

# III. SCIENCE

## The ERROR Illusion and CONFIDENCE

Philosophers doubt, in a characteristic manner undermine the obvious conclusion. As a result, the senses become the instrument of experience, generally the type of fraud or illusion. Thinking behind it is correct that the search of an unknown substance of things arise imagine more true sustained directly from Reality. That's it, all his reasoning, all of them, suddenly suspend the circle, postpone them, send to devil, when we try to describe what is happening and how to understand the world. Suddenly deprived of distance, not doubting in their despair, they become confident, they see clearly. Learn the truth about his

ontological but not relate it to their own relationship: I and the World.

Meanwhile, the relationship of cognition is suspended, uncertain, ambiguous, manyroads, Array, once: true and false. Runs counter to the logic, but the world is not logical, the logic is a tool only for temporary use. How to pick, engine or computer. We know that events can give the probability of its occurrence, when we reason alone, we become arrogant, certainly burdened our argument. In fact, we are constantly amazed, enthralled, not knowing to the Unknown, but at the same time confident and arrogant discouraged. We like to swing in amusement park, the fun and the grave at the same time, arrange and fall into destruction. We know that we do not know, and we know that we know and yet we know all this, manipulate and wait, what's next.

Each of our reasoning has two aspects: simple and complex. But when we know, still further and deeper, looking back, we find that previously used a more simple way of seeing the world, still maintains its transition date. If we look to the future, in our ever more true discovering, we begin to realize that in the end it looks like the past. The new road we will find a more comprehensive explanation, but just temporary ordered to-date. Then we see our path as a spiral, still reeling circles, climb up, we do not have hope that there is something more than just further down the road. When we notice, we acquire respect to all past, even the simplest of ideas, as legitimate and sufficient once, as is sufficient for us our present. We can only talk about responsibility, about the fact that knowledge is for someone or something or at a given time, more or less appropriate. In this sense, there is no absolute truth, and the World of the Child, sensory impressions, image, thoughts,

all Human Theory and Practice, have a common denominator. The denominator is a simple, personal reflection in believe in his healthy senses, located beyond the invisible boundary viability, the fact of being a being. Then turns to the necessity of living in a group, and the valuation to the World Group, to rise above the die and the ability of the individual and group deferred. This need is widely understood ethics, what is right and what is not.

## OUT OF IGNORANCE

Highlighting our limited capabilities, not on the depreciated intellectual effort, scientists, educated people, pundits and practitioners of different professions, all users handfuls contemporary achievements.

Attention to the fact that all successes are the result of systematic ignorance, I address only our perception of the interval between the expectation that it will be announced some deeper truth about reality, eternal and unchanging, and which are the counter, actually evolutions sciences, where truth is relative and is likely to lose their relevance in the foreseeable future.

Of course, the question arises where the perch erroneous claims, blind alley science or other seemingly useless, the remaining effects of human activity. What they are, they have already thrown in the trash of history Mental antiques ? Are they the same as the rest of our ignorance? Are arranged as in a separate drawer, that the computer is defined as, basket and mobile phones called Archive ? Forgotten your waiting for a possible chance. While not at all be null and void. This is due to the importance of structured activities prior to their classification as unsuitable. In many cases it may be that the possibility of further potential use is a matter of time, association or other appropriate for practice. For example, quantum theory is much more complex than considerations such as the medieval devil is on the tip of a pin. It is difficult today to imagine that a few hundred years will be seen as the devils fingers. At the same time, if not scholastic monks exercise the imagination, today's science could not fertilize, crossing the border dreams of philosophers ? These Blind alley to compress and allow them to continue to live in the historical archives to the potential use.

But what is happen when we go out even further, beyond the already known, safe area bookkeeping?? and business plan of science?

First, the observation suggests that the area That we do not know is greater than that which has already met. The word does not apply to the area of space or time, a number of dimensions or of any size. The area is a potential

characteristics and properties. One might note that in this case the area is best ignored and did not deal with him, because he does not have any meaning for us. Like, for example, demand and effective demand, it is important, rather the second, which is backed by a feasible option to buy.

If the lottery numbers were known, perhaps not at all I does not this writing. The same is true with science, we do not know where he uncovers an important future directions. Despite the apparent channel the perspectives and the organization of scientific development and technology, still there are unexpected returns and improved. Therefore, each area of potential characteristics and properties may be of interest. Like the studies carried out on the entire population of prevention in order to detect a small number of patient cases. In this context, it is an area-oriented simulation and for speculation fithing future, probable or very surprising new, drawers ignorance on the higher shelves of cognition. Statement about the size of this region implies a method of penetration, not only as a fluctuation of physical phenomena, but the alternative, generalized separate ways and directions for further interest. You can accept the assumption of go out the real world beyond the capacity of our building models, invent it yourself, or any creative activity. So I man does it sound but not outside the local area. Where we have assumed from our smallness. Accept that, in addition locally, everything that we can imagine can be realistically achieved. Reverse way of thinking and the belief that only some of our thoughts are true, go to the conviction that they are all true, but only some of them are now beyond the reach of reality. This semantic change draws attention to the size and potential functions of the real world beyond our individual and universal opportunities, now and forever. As a result, even such a state of consciousness does not satisfy us and we will seek further opportunities. Manipulate all the elements of our prior and current knowledge, imagination, confusion and feelings of people. Only thus can we engage the full potential of everything, because even the great and difficult to comprehend the mass of information is the proverbial Drop in the bucket to show the new field of knowledge.

Secondly, we should dispense with the existing regulations of reasoning, and above all the traditional logic. We can not simply just build new models and move within them, using logic to examine internal consistency. What is needed is the logic - the model, allowing for the existence of what had been considered absurd. In the case of creating neologisms, we use, and other nonsense bornword, which still runs in the end because of the richness of reality. Does not relieve us from the obligation to specify the models honest, to distinguish them and non-instrumental treatment, or abandonment of confusion and chaos implemented for immediate political purposes, the material or personal.

Thirdly, we should assume the existence of artificial intelligence, and intelligence in the Universe in the universe, of eternal life, that is, the possibilities of recovery and adequate running of our personalities, meeting at the time, that is

with us from the past and the future of our expansion is oscillating between different states, allowing freer not true experiences collapse. Our traditional, although modern achievements, and develop combinations there of, etc. It's not about the truth of the courts but by the technique of training intellectual.

Fourthly, it should be in step with ethics as a form of exploration, without disdain rooted, genetic or cultural barriers. Not to break, for knowingly making or selecting a more ethical people predestined. Both the exploration, development, and selection can not be institutionalized than the necessary measure. Ethics should liberate us from the wider sense of cosmic loneliness, religious, social, cultural, psychological and existential.

These are all reflections and predictions are at this moment, only the outline, ideas, vision. The object of interest is the philosophical idea of ideas, or as something that can not and never will be, will affect something you did not imagine or falsely imagine. It remains to blackmail the lines of: And the worse for our imagination because reality has a GOOD ? They remain as support for this position, the memories of village elders, who did not believe that, on two wheels you can ride, unless the devil is holding a biker. Remain educated, wise in its modern times and is now silent, for example, criticizing Copernicus, Galileo and others. Remain aware of the false conviction of infallibility, and the proximity of some absolute truth, returning like a boomerang, the sin of the educated, ambitious and arrogant.

## **POWER ignorance**

The fascination with the idea that the truth will be known, the source of power over the world, the ability to manipulate its elements, becoming a wonderful, satisfied, bunkers and happy, is truly tempting. Over the last century we give in the conviction that the development of science and the human mind we are able to guarantee this. Take a close look at the basis of those beliefs.

Man appears on the background of nature as a unique creation. Same comparing it with the monkey may be considered offensive. Despite this, the study of physiology of homo sapiens does not indicate specific differences suggesting separation from the world alive. Testing drugs on animals, the biological sciences in the course of medical studies, the stages of human fetal development, are examples of enabling our being linked very closely with all the surrounding nature. Ability to think and its use, technical progress and cultural, can thus be regarded as a characteristic inherent world as we know. After all, the observed differences and privileged position in the hierarchy of organisms, may at any time prove to be

nothing worthy of an illusion. It does not matter whether our optimism, a kind of conviction that this does not happen, we rely on the Rights of the divine, or Strictly scientific ? If they fail, just once and for all disappear from our entire conceit.

When we look at rates, we stand on what we call planet Earth. We do not know whether the change in its rotation, and orbital inclination of the axis will not lead to total disaster. Looking at the sky, we see close objects, such as the moon and sun, but also very long, which ran billions of light years. This allows you to see them as distant history but in these distant galaxies is happening now, we have no idea.

We assume that light is the best informant and did not have better. Limited his speed, curvature of space, exceeding the expected entropy of our ability to understand the chaos known from our daily lives, we are actually have big wall, shut up and obstruction before the real world, hidden behind our limitations.

Knowledge, understood as set theory and its extensive grounds, is at a time from scratch and converted verified by observation of facts which could not be clarified at the moment. Still we are bulding, abandoned long ago with the ambition of absolute. Satisfied with the relativity and locality of knowledge and methodology that adapts new ideas, trends and ideas, provided that the assimilation of earlier experiences already known, and their generalizations. Is a defining characteristic of older developments, as special cases in the recent abstract explanations.

The development of tools to explore and exploit the phenomenon is not under the direct receiving them by our senses, indicates the limited scope of both our senses and the tools. Since previously knew nothing about such as electromagnetic waves, why are we now to believe that there are other, still unknown to us the characteristics of the World? Unknown, countless Freaks future of science?

These reflections lead to conclusions about all human knowledge, but rather to Records of some vast ignorance. In this approach, the focus begins to shift is not large, recognized and recognizable artists successive milestones of science, but the unlucky nameless, known only to few, who never won the fame, and their failed attempts, only confirmed the lack of relevant and useful effects on the test area. They built the foundation for the positive and the famous â?? The narrow paths of knowledge ????, pushing ahead a moment to recognize something as ignorance. Our knowledge is the only deferred ignorance.

If, however, is so bad, why do we also feel pride and satisfaction with the results achieved? What makes a good judge yourself? Why, despite the lack of true knowledge, so much has been achieved?

We are beings who, first, do not have to do something real to see the effects, they may do so in the imagination, develop as an artificial world created by moving it into a book or other devices â?? Writers?? or using the information.

Secondly, regardless of what we build generalizations, theories and beliefs, are in fact, inspired the positive results, we manipulate both the imagination and in practice. These manipulations lead us to the practical positive solutions.

Thirdly, as a society, sync and coordinate efforts

in time and space, and providing knowledge (ignorance) between successive generations.

Thanks imprints imprint on the environment and ourselves. Make the transformation of local reality, can not fully understand how it happens and why. Our evidences ignorance, plus a practical activity, building a quality, a path on which we walk. Ignorance has become our strength and the famous. Know that I know nothing, cornerstone of the causative stimulus, and energizing. We learn in spite of everything, keep alive, expanding. Whether we focus on what we know or do not know, we can even disputes and tensions build with ant practical diligence, to forge his own destiny, to climb toward an unknown future.

## **REFLECTION (NO) and restrained**

People do not have another reason to learn how their own reflection. She is the only real measure of what is, what we consider to be true, what we accept and what reject.

Scientific knowledge, belief in God, the other strong beliefs about anything, are embedded only in the reflection. Regardless how this reflection is deep, it is always and in each there. May be unconscious and did not appear on the meta level reflection, which may not have thought that we have a reflection of reality.

Only the criterion adopted by us, which we consider to be the guiding value, all knowledge hierarchy. But this value, and this hierarchy, determining what is important, for example, that scientific knowledge is more important than other means of insight into the world, are the result of our reflection. Besides her there is no support for thinking, feeling, expression.

Personal reflections are discussed with the beliefs of others, the result is a strong conviction about what is true, what is more important, what we consider ours, and as foreign. Then the reflection is restrained, shall establish criteria to confirm it begins to ignore the signals suggest anything different.

The most important of these signals are:

1. The possibility of a long series of events supporting repeatable rules that suddenly stop and cease. Work For example, we may be involved in Local Reality, which has its end or becomes profoundly transformed. This will be a catastrophe beyond Space (Globe of Earth) or loss of intellectual abilities of entire societies. Stop known to us the rights and abilities.
2. Inability to grasp the phenomena of individual, unique, original, which, although not to repeat is an important factor in the observed reality, such expanding, beginning of the universe.
3. Role for the causal relationships. We note, in addition to regularity, a huge impact phenomena, events, random behavior, both on individual lots, as well as the history of humanity, the universe. Reassured us the Gaussian curve, the mutual abolition of the system or particular factors present, but only in the phenomena, which imposes a study in which we reject in advance the elements is right or not to the target test.

Hence the proposal to replace a cautious and restrained reflection of reflections. It is difficult to maintain in the precaution because the emotions and the need for a sense of security being pushed toward what we understand. Philosophers are constantly trying to knock out the other with a full sense of complacency, but it is sometimes perceived as a lack of competence or a piece of malice. Hence the proposed Homeland of the Imagination, as an instrument auxiliary factor to restore balance.

## **HIDDEN STRUCTURE**

Once you find the unknown in this area, when we exceed a record of ignorance, we look boldly into the vast territory of what outside ourselves, then we find the total darkness and emptiness. We have already learned from the experience of previous generations, support a large and vast edifice of evidence, that the darkness and emptiness are apparent. We know that beyond what is already

evidence something else. There is something real, something appreciable to manipulate, are some unknown to us but actually existing structures. For their discovery needs time, focused effort and will, imagination and a bit of luck. Counting on the principle of continuing to build models of them, by manipulating a real effort to focus on areas with higher probability of success. Going in the simplification reduces to imagine that if something works in a small area will be similarly greater. If something is true on a small model that behaves similarly to the above. If we use small numbers to the larger principle of operation and allow for proper conversion. For example, if the  $5 + 5 = 10$  is when we imagine a number beginning with a digit 1 and let us make her a very large number of zeros and finally the number 5 is: 10000 ... 10000 ... 0005 + 0005 = 10000 ... 0010 get digit number starting at 1 with a very large number of zeros at the end the figure 10 We believe that this principle will work for any number of zeros. Faith in Action this principle allows us to construct models which, in our imagination are moving to other, larger areas and we expect similar, analogous to the previously obtained results. Since some of the border, the accuracy is confirmed, satisfied with new theories, for some time, and then building a new, in a similar manner. The disadvantage of such an action and thinking is something that recalls the serial arrangement in a circuit. If, for example, the Christmas tree bulbs combine in this way, it is sufficient that the gap to one and the whole system ceases to function. As in the pattern of electrical connections, parallel connections are better, allowing the system even if one of the elements is inefficient. Therefore, in science and in the search for truth, we should rather a network of possible solutions, rather than rely on the only right way. The theory of relativity, we fully highlighted that the principle of continuation is not operates at high speeds. By changing the speed of light mass and energy, and appearances continued understanding the world to slow not adapt beyond a certain limit of increase. It is expected that similar restrictions will be encountered at each exploration. Therefore, network, or a team of various possible solutions, can and should replace the principle of continuation.

Once we know what we're looking, and the goal is unknown, actually existing structures, build in our imagination the whole structure. We like to be extensive and simple at the same time, group them and they evidence. We can do this using for the Clean imagination, not one man but all mankind, of all people in where we can find something original. What could be hiding there? Much more than the previous ideas about the world, the Universe, Wholeness. For example, we can build a model image of God, who built the world as powerful, as it is, created man, that is, put yourself in it, closed the structure giving the impression of simultaneity, variability and intelligibility, it passes from individual to individual, extends and manipulates time and space so that it sees itself in other forms, which have already been or will be until, as the keys and looped in the virtual maze, he finds himself reliving everything, every time different, in fact, lonely and scared, all-powerful and unlimited, large and small, simply divine. That is why we have consciousness and will, therefore, we discontinued our life or cause others to do it

for us. We return to the form of non-being or to be alive. Therefore, we find ourselves in a neighbor, injuring others, condemn, and lined up his fists.

This is only an example and raised wandering imagination. If you want to Strike in a more pessimistic tone, it is enough that in the chaos, a powerful, inexhaustible and no imagination, in accordance with another image, created a small vortex matter, random system, win the lottery, something that should not happen at all, but the black centuries and centuries of multidimensional many-world, emerged and one moment all is right, not only on the similarity of our space-time but, strangely enough, unwittingly hatched a human being.

Is it true or false, indeed, are so crucial? Is traditionally understood internal consistency and logic are not instruments of local World and limited, local records? What is written here is just a simple simulation, suggestion, idea, something that can be safely discarded into the trash and deal with really serious problems. Not even worth to be indignant, because the No professional and little originality argument are visible to the naked eye. The author himself is suspected that there had never Lofty ambitions. Matter what the deal is not consistent with the term scientific. Rather, it is thought composition. Note that the same approach to the problem, so unthinkable could be key to understanding something.

## **PRIMACY OF THE ACTUAL WORLD**

Imagine that everything we know. We know, as humanity, the fullness of knowledge. We have the ability to manipulate all what I can. Want to be immortal? OK., Abracadabra and you're. We live as we want, nice, a wealthy and without any stress. At the same time active, engaged, healthy, full strength and motivated. Better as the gods of mythology.

But such a state would give us the confidence that will never change? Whether such control and continuously validated and monitored to control the World, certainly would allow for quiet Eternal dream?

Probably not, because when I once imagined the possibility of Transcendental World, we are not free from this, even if it's not confirmed its existence.

This seemingly absurd notion allows us to realize that any product of our imagination, our knowledge and understanding, are always subordinate and subordinate REALITY. She decided and will decide our fate, her character can always be unknown. So regardless of our beliefs, or depending on them, always verify our real world activity, the reasoning and the future. Even if we assume that each sentence is written here is true nonsense, then yes, more than a deep conviction of others, the only final he will verifier, Real World, which roll on like a steamroller.

## **OUR SCIENTIFIC KNOWLEDGE - Assuming MEET THE EXPERIENCE**

Our scientific knowledge, providing the experience and knowledge to create models based on repeatability and stability phenomena of the environment. Deprived of this, we become helpless, lost in the chaos. So we can know only in so far as the environment, and we ourselves will preserve some stability, constancy, equilibrium, homeostasis. Deprived of this, we stand face to face with the unknown and unrecognizable reality. Not without significance, therefore, is how the world, we do not know what would happen, over time, or we will not themselves revolutionary change himself or any other balance in the environment, and do not call the state in which our knowledge and prove their skills too little to tackle such a disastrous situation and the upcoming destruction. We can talk about our success, the triumph of humanity, only until the reasonable rejection of randomness and unknown otherness. This approach is not the fulfillment of another, which would give rise to and subsequent reflection. It provides a proposal to the imagination, visual and emotional excitement, an attempt to merge physic & spirituality.

We are facing something unknown, unfathomable, which will be forever unknown and no end in greater depth. But we can not know otherwise as this in a conversation with another man. It is something unknown in the concept of Infinity, but a man is infinite. Still other people are also some unknown, inscrutable and undefined. Created an analogy of man and the unknown world to us, the analogy of experience that the unknown and our attitude towards this. The attitude should be simple, honest and brave, face to face. So we need to be endless as to the unknown man, looking straight in the eye and boldly leading the conversation. Only this discourse, fair rhetoric leads us to further understanding. Not conducive We act purely scientific, similar to know better someone sideways approach and perform tricks, leading to: such undue, a positive result, allowing for impunity and free manipulation of the whole reality. What is between us and the Unknown, recalls the conversation. This conversation is not equal, the priority has always known. This

relationship allows us to approximate the truth also given us something. So it is unknown to us and we said an unknown something. So we have access to the truth.

The unknown, Eternally unknown, there is something intelligent, which allows for a conversation, if it was a community of thought, the conversation would be unnecessary. Mind, may consist of two minds, one of them answered the call but he is not talking. The second talks but did not necessarily hear the same thing as first heard. The first thought in circumvention without communication. Is this just cause, that our inner relationship is similar to the relationship with the Unknown? Learned the language and concepts of consistency, although necessary and fruitful, destroys or limits the uniqueness of the original, individual thought.

## **EFFICIENCY OF KNOWLEDGE**

The nature of scientific knowledge is not determinative of one kind of factors such as whether Induction falsyfiakat. Its success determines generally understood that the efficiency of knowledge that is meeting multiple criteria, and so it is quite beyond our consciousness, which as a result of social prejudice the practical applicability. This is not about simple pragmatism, benefit, or recognition by the scientific community. On the efficiency of knowledge consists also because of its historicity, randomness, suggestiveness, ethic, reflectivity, and many other interactions with the wider sphere of social and technical environment and the environment (eg, genetic addiction). This conglomeration of factors go to practically implemented a path through the settlement, spontaneous coalitions, cooperation, scandals, revelations, and common misunderstandings. Finally, at a given time we have a general perception of distinctiveness of what science and what does not. Attempts to establish criteria for the longer term appear to be devoid of any justification, which of course should not cross their efforts to find them. Like all knowledge, which undergoes constant transformation in the historical process, so a reflection on more general principles of scientific method, such changes will not be able to resist. Guiding principle should be because the relative lack of permanent rules, flexibility and willingness to adopt something new, even shocking.

Arguments to condition of scientific knowledge is of course correct. With that in the era of computerization, we realized that the surplus (knowledge, information and justifications) does not explain anything, but on the contrary, can obscure the image and the reader's patience exhausted. Thus, the justification should be clear that it has become clear, it is possible to know and grasp. At the same time should be hooked in the existing knowledge, of course, to the extent

possible (eg highly original proposals, which depart from the earlier ideas), so specifically in order to ensure it possible to classify a group of topics, such branches of knowledge or idea. The same would be a profound revision process currently used in scientific careers, and also significantly reduce the time and atomic amount of information necessary for the presentation of significant ideas, research results, publications, etc. The knowledge should be originality and ingenuity, for resource messages already we have , and let the evidence, which guarantees that we will not be doomed to follow longer paths cognition. Knowledge and truth are therefore not only a goal but a process closely related to the situation, accompanied live of biological and spiritual man, in his perplexity and amazement over the World.

## TRUE AND FALSE

The question that bothers thinkers for centuries is to determine what is true and what is false. This question takes on a new word, if our imagination to change related designata and beyond their borders. Similarly, if we are in the limits of the mental model, or it will cross. Being in Nearby designata, our image and thinking are closely related. Reality is then perceived clearly, and thus is in the area more or less conscious of mental models. Experience and scientific methodology are only becoming more complex processes of observation, verification of records and explicit closeness designates. Directs us a sense of Obviousness and sense.

Truth and falsehood are the categories of internal consistency, compatibility and formal consistency. Dates back only as far as the extent adequate to the reality of mental model is adopted. There are so completely artificial or untrue. Are useful and necessary, provide the necessary levels of our knowledge. However, have limited scope of action, as saying that the point of view depends on the point of the seat. In this sense, there are no absolute truths and falsehoods.

But when we find ourselves outside the designata or something stand up our feeling. Obviousness, then build mental models, using the truth and falsehood in another way. When a high level of abstraction we assume parallel thinking, matrix, table, a feeling of truth and falsehood is a multiple of vacancies on guesses, speculations and fantasies.

When changing our sense of Obviousness in relation to designata usually reject the whole truth and falsehood of the mental model, which no longer corresponds to our perception designates. For example, the confirmation of the Copernican theory and its verification in the era of spaceflight, can not accept as true the belief that the earth is flat and the sun revolves around it. However, under a

system of thought Berkeley's subjective idealism, one can imagine how God has changed our vision and thinking about the world. Our sense of Flatness, transformed, Sphericity and thus a sense of truth has been transformed. Similarly, we can imagine the transformation of monads, together with us and the whole world around us. The most serious allegation which, in fact, we put such a way of thinking that his little practicality. Easier and simpler to say about the falsity of the old views and new truth. If, however, turned out to be, for example, during space flight or during therapy with a psychologist that you get tangible results in the typical thinking of subjective idealism, or using monads of Leibniz, it immediately took to the values of thinking in the mind of the universal truth.

Historical feeling Obviousness allow for distance and reflection on that feeling. Since so many times deceived us, why now is to be "more true ? In addition, you can put an equal sign between the historical feelings. Obviousness and its current expression. Rather, it suggests that current or obsolete, and awakens feelings of alertness, that they should be changed when confronted with the important, legitimate premises to make such a change.

## **DEVELOPMENT OF A SCIENCE SPODZIEWNE BENEFITS**

The dilemma that the development of science can also include issues, which shall be deemed to have little interest or outwith the area of interest of researchers, there is no scientific arguments that would indicate the need for its omission. Researchers at the moment or "?? take water in his mouth?? or give the original, although the guiding nature of superstition, it's also encourages them to give up this superstition. Their only argument is to have a stronger or not, money for research. Someone who considers the so-called. urgent issues of modern society (it can be, for example a group of scientists, bankers, military industrialists and bureaucrats), you will not want to risk his money (in the end always limited) to serve something that (he) considers valuable enough. Our dilemma is not so the nature of scientific and sociological connotation only. As long as there is no spectacular acts or tending to change the outcome of such an attitude in a group of decision makers, so long a wide range of scientific problems is to hide the junk. Waiting for unusual sponsor, particularly suggestive of the researcher, will last until the adoption of the ungrateful, as it currently seems, to pass the tasks and bridges for the problems that traditionally, a few centuries, we consider non-scientific or metaphysical (it is not at the same time, only about astrology and voodoo but the vast area of potential research into physical phenomena).

## **OBJECTIVITY, subjectivism AND EXTERNAL FACTORS**

If the subjective factors affecting the choices of methodology or research-oriented, we understand your preferences, strong suggestions about the nature of aesthetic taste of the courts, metaphysical prejudices, desires, religious beliefs, family traditions or the environment, and the external factors affecting a significant impact on these elections, the outlook career or access to funds, it must be noted that they are not in conflict with the desire for a fair representation of reality, that is what is observable or unobservable. Presentation of the objective has the advantage that it becomes easy for the great masses of people, allows universal communication on the subject, but actually collide with the image of the subjective perspective of individual participants in the communication, and their creators and do not deprive the impact of similar subjective factors, such as a different aesthetic or taste aversion to metaphysics, religious or social trauma. Subjective motivation alone generally does not interfere with the finding of objective arguments, nor destroys the scientific method or target. Only time, ending in the subsequent confrontations and collisions, the author maintains the theory or its followers, the ability or lack thereof, to interact with the larger objective multitude of communication participants. Thus the two looks: subjective and objective, as complementary, should be considered relevant, including the need to harmonize, complement, interlacing, correlation.

## **SCIENCE AND NON-SCIENCE**

Distinguishing the scientific method, which includes a set of accepted concepts and methodologies to make spectacular discoveries and finding new, progressive solutions, from non-science, understood as any other activity, suggesting the existence of the aspirations and efforts (those from the non-science) to know the truth and reality that they are doomed to failure. Considering only time to date of what is called science, you must verify this approach. Since we do not know ? Where we go and where go ? We can not prejudge the so-called. truth, while the methods leading to it and the future performance or suitability of what we do. The idea that the earth is flat, not in the cognitive elements, but a comparison of the Copernican view of the concept of relativity teaches us now professed truths. This is not a problem professed views and to move away from old ideas but the possibility of using the knowledge for quite other purposes or otherwise. From this

perspective, there are no useless non-scientific, because everything is to be used. Effort should be made only work and a new approach that provides utility. For example, the old ideas can be used as a story or set of imaginings, and the comparative statement. Similarly, in the form of positive knowledge, giving a straight principles, theories and truth. Everything possible to create learning, or explore. For example, fantastic images and stories may be the subject of cognition as a set of creativity in the cultural creations of man, whether we consider them to be true. True because these concepts are as an object of study.

## ALWAYS MODEL

This is what we create through words (and thoughts are often the words), it is not always reality, but only just some of its mapping. Words are just a model, and their range of concepts is associated with a number of assumptions more or less conscious. This assumption only to a certain extent reflects the reality, and thus is only an adequate approximation to itself. Never outside Real World is not the same as the World Conception. The latter create the only Our heads and is only a model, an artificial structure, which we use depending on how it falls within a specific realm of the imagination.

Assumptions are built the same as in mathematics. When we make an algebraic action is necessary to assume that eg  $1 = 1$  and hence that there are two identical things, the craft items. And this is really not. There are two identical things. Although counting anything in the real world, such as another piece of bricks, we know that they are not identical, our artificial assumption that these are, let us count them. This is the appropriateness. We have a false model, and despite this we are able to use it in practice. Nevertheless, scope of our model, no matter whether it be mathematics, the scope and comprehension of words, or any other area of interest will always be limited, and it can only to a certain extent, to a certain limit.

Our head is not the whole world, regardless of if we wanted. Therefore, there is the paradox of a tortoise and a runner, flying arrows, or webs *Mobius*. Earlier assumptions terms of traffic, top and bottom are also only models, which range at some point it ends. So even though we've never seen a round square is such an absurd juxtaposition of words is only the initial assumption that the wheel may not be square, pull back when these assumptions we can assume that it's such a strange and impossible.

## In LEARNING FUN

We can imagine computers or robots acquiring knowledge from huge speed and a great volume. We have the idea of God, omnipotent and omniscient. Our feelings and emotions are such that she is befriended by animals or even yearn for the objects. Why, then, science, knowledge of mankind, would not be a form of a nice, spiritual and actual activity? Form of communication across boundaries, for various social groups, sexes, nationalities, religions and races? Available for all volunteers, entertainment property. What prevents us? We are doing an attempt to simulate the learning fun.

We have a deal at the beginning so that the above statements are true, that is likely to be realized. Then, hypothetically, the factors that hinder us, for example, paranoid define as follows:

First, the envy of researchers created by the barriers and the desire to emphasize its uniqueness, or their vanity.

Secondly, the reluctance to simplify, achieved the synthesis of knowledge and its overall presentation, so in the field, as well as between its specialized branches, branches, objects.

Thirdly, the difficulty of establishing a common language of communication, based on the functions they perform elements of reality, not their meticulous description, the interaction and translate variety of specialized terminology in this particular language.

Fourthly, the awareness of researchers that may be coincidental ingenuity invested more important than labor input. Gain fame or make a remarkable discovery if a layman may be lazy, whom something unusual goal to head ?

Fifthly, convinced of the need to exercise control over the who, what and how to do, especially in such important matters that may affect the fate of all mankind. Fruit ingenuity should not be in the wrong hands.

Sixthly, the local interests of individuals, social groups, nationalities and countries located in contradiction with the general interest.

What would happen if Somehow These obstacles could be removed? If suddenly or slowly Stiff structure and building of firm collapsed?

Begin to be Science fun ? Any intelligent and eager mortals might gain access to knowledge creations the real scientists could become, only speculators manipulating pure target, hardly earned knowledge.

Contrary to any suggestion, traditional science is not at all would be forgotten. Constitute the most important cornerstone, the source of laboriously augmented the grounds on which an individual user could manipulate the information humanity. Would be fun while teaching and popularizing the form as well as to persuade talented people and proclaimed their views.

New intellectual product, would have to be popularized and harnessed in the global system of intersecting tasks, opportunities, encouragement, and obtained satisfaction. A huge, interactive media, widely available and acceptable, it would be fascinating and useful science of Game ? To realize this idea would plug the next narrow specialists, both philosophers and linguists and psychologists. The idea could come true for international cooperation, an enormous organizational effort and with great effort the capital.

Traditionally understood right or author is right have been modified, and the fruits of knowledge would become available, without prejudice to using them-makers and practitioners.

This vision, although today, unreal, is an alternative, this potential remains untapped.

## **Strange MATHEMATICS**

Always (eg your children) have insisted that two plus two is four, not because you as the teacher said. Sure you can not always understand my suggestion, and even more embedded in the statement of opportunities, but many complex theories have their origin in a very simple assumptions. Similarly, when we hear about the activities of infinite sets, not to mention , matrices, or almost decreasing marginal utility, delights some may be apparent harmony and order, which introduce the mathematical models.

I worried constantly thought of the teacher. Finally, unless I understood that reality takes precedence over the theory, namely that every old idea can be replaced by a new, different and so far, because each image, the model or theories are false. We know this but we accept that this is false, for the sake of practical utility, be

regarded as truth. Mathematics then ceases to be an artificial creation, becoming a tool for something. Like Alice in Wonderland, you can play with ideas about numbers, manipulating them freely, changing the laws that govern them. I thought, for example, the NWP, which is the largest conceivable number, such that the real situation of humanity is able to serve, the vanishing numbers, those that are, but if they will not be, and so nothing happens, the unknown numbers, which we know are, but never will be known, etc. And though, perhaps for lack of time, not necessarily function properly understand the principles of fractal or holographic, it does not matter, because my math has broken taboos and insight into each new model or hypothesis mathematically recognized, became more free. If, for example, does not replace any large numbers, numbers, arbitrarily small, and we will not use them without restriction of the current mathematical logic, the freely-created logic of mathematical description of what today would be unimaginable, you will still be difficult to achieve. But not holy pots and not for saints ? The math is like a cookery book, we have recipes for many tasty dishes, but we can find new, giving up almost completely, so far.

## **THINKING Matrix And PARALLEL (ALTERNATIVE)**

Of course, it is not a simple matrix or parallelism. Thinking matrix does not allow us to solve problems, responses and understanding of reality to the end of its intelligibility. The matrix is open, it is characterized by ever-increasing number of unknowns, which is always more equations than possible by us to solve. Therefore, forced to self-limitation, compose simple systems of equations, we focus only on the restricted number of arguments, creating models. Because our thinking is linear, unable to grasp the multiplicity of events at the same time, extremely popular reality piling it in simple diagrams. Becoming aware of the possibility of creating a more complex matrix, allows the individual to shift attention, not only between the phenomena characteristically linked in relationships of cause - effect relationship, but also between modes of thinking, which allows for acceptance of an emotional and sentimental at the same, individual individual, radically different, and even conflicting views. Such thinking has its advantages, primarily increases the possibility of manipulating the elements of imagination and reality, but also disadvantages, because, Stirred in my mind leads to lack of precision and makes it difficult to grasp and understand the information provided. On a scale of knowledge of humanity, such a juxtaposition of different models is widely thought. In each one of us, in a personal feeling. However, some views are accepted, others rejected and never appreciated.

Naming things stems from the real, concrete objects. Word, which means the object is a sign, symbol, which must associate with that object. We can say that the real world is full of designata, or what it is called, and singling. The name itself is actually designatum conventional. Language is established, inter alia, adopt rules for determining designata in the community. But when we realize the conventions of the phenomenon we can try to create its own language understood by few. A fun word ? At “ka-what ka-are ka-you ka-do ka- ing ?” are an excellent example of this. Similarly, in the Forces and special services, ciphers used for the transmission of a particular person needed the information. When an elephant called ant this sentence: a herd of ants have trumpets going to water, has a meaning. If we know that we are not dealing with a lunatic or a foreigner is a mistake to easily read and understand this sentence. Even if we are not prepared for such change words is quite fast in the context of sentences, we can find in the true sense of expression. So when I say that in their mounds, built up laboriously eliminate the giraffes pine needles, we check easily the true meaning of the sentence. Pure semantics. Simple. But why all this?

When someone is directed to his statement that we do in some order, with a specific intention. There was an agreement to give the intention should be read. Proclaim, please, please, we want to make the pleasure or displeasure. It is important what others want us to do. True?

If we imagine that we are spectators of art, in theater, then we see at least two planes of reality. The first is the dramatic thread, which is presented to us. It's what moves us, anger, and what we experience, which basically affects our emotions and feelings. Second, it is aware that after all this is not really happening, that it's just art, the actors who have prepared their roles, who really are not angry, not kill, do not have such great character and Mean as it might seem. That awareness comes with age. Children who have not learned that Plane react differently, throwing themselves onto the stage to save the endangered rabbit, shouting flee , you watch it ? etc. It is wonderful to see her child, who reacts so, we would like to have such a genuine sincerity in all adult men.

But that's not all planes. This piece after someone wrote, and we can also try to write or imagine. What they think the playwright who wrote the drama? Writing a screenplay writer, novelist, book and poet poem? Imagine that you have different ideas, the writing is not like they created the text, make changes. Do you wonder how on this or that scene would react reading, watching? If so, have at least three planes. One is the idea that they want to communicate to the other, I assume something in mind and want to pass something. Something lived, and knowledge about other matters, it is something important to them and they want to have the others. Share something. The second plane, a reaction implementers must take into account whether what they write is "? What is to do ?" by the actors, stuntmen, choreographers, etc. The third is the feeling of the audience listeners. As far as it

will coincide with the idea that they want to convey. Does the intended effect is achieved?

And what will happen when the author falls into the idea of describing the creative process of some other writer, confuse threads of his personal experiences and intentions with what he wants create? If this writer hero, will be reflected on several threads? And if the heroes of the movie screenwriter will for example, couple in love with the script writers? How much will the planes? We see that there may be very much, and when we see it, we will always have one, aware that what we see is after all a fiction.

Well, we have a lot of planes on which we can see, we saw some movies, such as advertising, comedy, Robin Hood someone says that they must always fire spin their village as Robin Hood.

But so what, what does this have to do with us? Just so. Our poor think once learned can not forget, he knows that everything he hears and sees what is happening on many levels, you can not cheat with impunity and still expect it will be just as naive to react to stimuli. Raises awareness of multi-dimensional and such thinking. A thousand of films, I realize that I have seen it somewhere. On Cast Away had a mixture of the eighth passenger Nostromo, eg. effects the falling plane, but no friends of Robinson Crusoe, in conjunction with perestroika. On Gladiator was the only truly original battle with the barbarians at the beginning of the movie, then you have actually had to leave. These original ideas are combined viscous, the various taste given slurry. Worst of all, that this impression is not only about books and watched movies. It applies to real life, real relationships with others, in which, willingly or not, behave in a way which you'd think: I have somewhere seen or read about it.

So how do we communicate? Reading intentions, give thought? Do not breed without a break for some A flat clichés while, be quickly and clearly understood. Not boring after several conversations, because virtually everything had already been forwarded by other talents. Do not look for some mindless, complex originality. I think many would like to know the answer.

And so, what is meant, said or written, is also play. Play is not necessarily intentional, but unavoidable, can no longer suitable or read the intentions of one plane. Indeed, no one knows what brings the information, nor what is the intention, given the many already known Scenarios. Everything, literally everything, may be only a version, mistakenly expressed emotion or feeling.

How to deal with this? As usual, the ideas are different.

1. Openness and honesty. Calling things by their names, talking about what we normally do not say. Getting rid of the feeling that someone who wants to use for

their nefarious purposes. Then the graft must be a bribe, touch by touch, caress, friendship, love, love, sex for pleasure that sex, and if there is a need, you have to say about them, and when someone else tell me about your relationship to this, take no offense. Cut the conventions, customs, certain standards and what people say. It's like a little meeting Two brains but with a little good will, intelligence and honesty can imagine an agreement in such a way.

2. Tight curtain. There is no call. About nothing to talk directly. Say what the environmental conventions bring, carry clear and understandable goals among people with whom we dwell, to connect in the course of pragmatic goals. Always have free choice and freedom in decision making. Put on professionalism, integrity, formal, should not be judged, to pursue those targets that are available to quickly reconcile with the loss of what unreachable. Peculiar, solitary, even when someone is an independent, hedonism.

3. Misguided intuition. According to the principle that only the human stupidity and the case can not be predicted. When there is something that can not be controlled by anyone. Do not be born ambiguous intentions of the action happens quickly, and if these are normal reactions, simple and straightforward. Is the case, and we save one's life. We ride the train and start a conversation with a stranger. We meet someone at a disco and we start to like him. Thief snatches purse and rob us. React, giving up current. We look forward to or worry. Giving up impression and keep it as long as possible.

4. Choice of one scenario. Despite the awareness that life and people write different scenarios, choose one of them assuming that that is exactly satisfy me, because I dreamed about it, because the person whom I met for such a match, because that seems the most likely. Decides to choose and stick to it. In the case of the profession, choose to be different, and again one and it remained with him. React according to a script and learn how to partner â?? Role ?????.

5. The combination of the investigator. Propose in the present case different solutions. Check them. Explore the reactions of others, perhaps someone else has already established a different choice. Be aware of everything, his head open and ready for change.

6. Creative cipher. Invent their unique behavior, reactions and language. Create something like the original language, which anyone with good will can be read and thus to communicate. Same code does not add anything new but in conjunction with other original ideas can produce a specific type to communicate, accessible and understandable for the few.

7. The wave. Undergo skills and inventiveness of someone else. Live the life of another person whom we trust, who is an authority, for example, provides plenty.

## GETTING TO KNOW, OR ALSO WE KNOW NOTHING?

Of course, we know that, but the models. Which is very helpful, checked, allows us to exist and change themselves and the environment. Hence the conclusion that our knowledge, though imperfect, flawed and difficult, it is somehow appropriate, adequate, located in a coupling of Reality. Of course you can give a comparison to rats which have undergone scientific experiment, locked in a cage, after pressing the button is food. But it is clear that our relationship with reality is not so simple. When I say something been manipulated, and if anything I do.

It's better to come to terms with our situation, to realize the limitations and instead argument to which model better, take all the blessing of fate, but only to assess their suitability against time for something to translate some elements of manipulation, once the other, closer or further shelves ?

There, wherever it is justification for doing so, especially when running outside the realm of the imagination designata, we should build a network of ideas, while many admit, even the seemingly extreme solutions. Do not be afraid of speculation, the absurd and nonsense, and so it is our imagination, rather than ill would be overly exuberant. There is no reason to believe that the Real World, the Universe, or size of coherent Worlds were so limited, as our

Thinking (including them), even in the most energetic mind. Do not be afraid to ridicule the ridiculous is only our arrogance.

We do not know the truth. Rather â?? We?? our thinking, and they are proving to be more or less adequate in relation to reality. Depending on whether it will guide the designata to abstraction and back or from the abstract to the unknown designata (And possibly back) are rules that apply at the same reasoning should be different.

Particularly when the latter method should not be guided by logic, or rules on conflict behavior. Should rather avoid thinking and introduce an alternative bill similar to the matrix, multi-faceted, multi Unknowns the alternative equations ? With that, we do not know a sufficient number of unknowns and we do not know all the equations. Thus we have an incomplete picture, consisting of elements like puzzle. We put him through a incomplete picture. Do not worry about the truth, but only to supplement the whole picture, because in fact when this approach does not seek an objective picture of the world but an objective picture of the human capacity of imagining the Everything possible to imagination about the world.

Indeed, the overall picture of the imagination is our luggage, a certain segment of the potential of mankind which they complete, the greater its possible, alternative utility. Usefulness is not expressed in the knowledge of the causal link, but in effect, impact, sow an indirect approach used in conducting our thinking.

## **Mastering UNIVERSE**

For example, you can imagine what conditions would have to meet, Biological intelligence to control the known universe:

1. It would stop the universe expanded
2. The universe should maintain its temperature or should it be warm, controlled by, for example Collapse ?
3. Should create additional universes, and draw from them the energy and matter, to control their expansion and are not allowed to produce the conditions for life.
4. It should be other universes conduct experiments with different  $\hat{a}??$  The laws of physics and try to make better solutions for our area.
5. As the development of life, should be controlled to create conditions for settlement and development of life in later universes.
6. Would create artificial worlds simultaneous verification of useful forms of life, and only those useful for the transfer of the Universe.
7. Genetic engineering, intelligence and other forms of storage or creation of personality should be protected and checked several times before being allowed to stay calm in the universe.
8. When faced with another form, a captive of the universe from outside, you must prepare the area and the method to transfer, escape, defend or attack a particular mask and a simulation environment universes.
9. All forms of intelligence to create the conditions for the development and connection to the relevant universe, as far as their progress and their ability to assimilate, and in case of failure to leave at the level of their capabilities, promote and sustain the existentially.
10. All forms of intelligence must be able to verify all

combination of existing resources within the Universe, and store them in  
copies

personality to time indefinite.

11. Should always be to seek and explore new Areas opportunities in  
all available forms.
12. Records should be made of elementary particles, including those records,  
matter of elementary and constantly looking for new and verify their existence,  
providing knowledge of the history and preservation of information.
13. You should always take into account that everything that only plans, already  
exists, that  
is a known or not identified a form of secondary education level  
intelligence, that should be kept constant faith in God, transcendence, and  
unknown  
opportunities, existing relationships with something not-known, especially in the  
primacy  
the highest and noblest tendencies in any form-understood and  
Unknown.

## **IV. I -- The C L O W I E F**

### **Coercion AKSJOLOGIC**

Whatever we do, act, think, and even with a passive, always it is all saturated  
with some valuations. Objectivity or subjectivity is only more or less emphasis on  
the external world or internal to us, steeped in the absence of agreement with the  
view of the way by other people.

Axsiologic being subjected to coercion, direct us, on the one hand positive, altruistic desire to win respect, help and salvation of mankind, or on the other hand, negative values, aggression, destruction, elimination of groups or societies, the desire to grab the fruit of others labor.

Whether our daily existence is linked to intellectual work, simple work of individuals or other forms of social activity, usually something pushes us towards lofty ideals or low motivation, pushing toward harmony or on the contrary, the destruction and degeneration. The motivation need not be explicit or unconscious. Sometimes involuntarily displaced low awareness of our motives, usually by finding some other explanation, and fooling themselves. However, deep in our psyche lies settlements, apparently blurred background, something that is ground, sometimes for a lifetime. Axsiologic coercion does not leave us, as a flywheel, the driving force, impulse of focus, vector of our being (and existence). Our understanding of the world is not dependent solely on us from acts of our will. Since there is no pre-emptive thought the same thought or feeling the feeling of pre-emptive or our consent before the birth, so what happens to us, being related to us, knitting is our thoughts, affects us in a way unknown to us. And while you can, focus to a causal link, look for the factors of this advance in our immediate environment, biology, physiology, nature and society, they in turn associated with more far areas gives rise to a further generalization. This world, in particular. Far and as unknown, because we have no basis to believe anything about him, in a metaphysical context, affects us in our thinking and behavior. Metaphysical world passes us, and the relationship with him, although not to know, is some relationship. This relationship can be called a conversation face to face relationship, or association of transcendence. Idea of its absence, the silent world, is only to escape from the imposing, obvious observation, the reflection that each of us can experience.

Are our Id also contains a vector of evaluating, through something that geological epoch, which lasted millions of years of evolution and selection process, delayed somewhere in the genetic mechanisms, is brought in as cargo information in the form of evaluation, vector, or something that indicates a certain direction. Reception in our minds of the vast information available in the form of acts of will, moral choices, remarkably similar in all humans, and perhaps in all living organisms.

## **THE STORY OF GOD AND MAN**

Reading the Old and New Testaments, I tried to run not only their thinking and understanding of what is written there. Equally important were the feelings and

ideas. When you have combined the whole expression, treating them as genuine and determining the real world, not myth or fable, created in a coherent overall picture. In outline, it can be described as follows.

There somewhere, beyond our understanding of space, a very orderly world. Is very old and has its own laws. We have no communication with him via the material cause and effect relationships, at least in our time and our space. In this world everything is not always successful, sometimes it comes to unexpected situations or behaviors. Is less or greater catastrophe of colossal, exceeding or comparable to all of our time and space, sizes. And this old world is doing everything to save the Drowned ? Begin rescue operations. In this case, the catastrophe occurred in consequence of the creation of individuals with undesirable traits. The only salvation was a terrible separation area and allow us to reap the maximum number of individuals. Individuals you should have collected as much experience in the world, who crashed, and then their positive traits are drained from the negative. With these good qualities, new, individual units, as a result of belonging to the old world. How many features of the World will be used in emergencies depends on the individual talents possessed and predispositions. The main thing is fishing certain amount of positive qualities, while characterizing the unit. So just because you can afford to develop these personality lives, in keeping with a sense of identity, in keeping with the desired characteristics useful in the Old World. Those who save us may not directly interfere with the process of developing the traits between individuals, giving a sense of identity. Otherwise destroy them, and do not allow for normal, useful development. It became necessary to leave free will, without anesthesia.

He was a man who is himself pictured. He understood that the harmony of the Old World is the closest Earthly mind of man induced the highest, noblest feelings and emotions. Left only to inform about this important layer of life, humanity, and to give comfort tormented by the negative passions and destinies of people. Persuasive argument was the greatest gift of love, sacrifice his own life. Voluntarily and without anesthetics. With full isolation, the harsh cruelty of the executioners and the maximum humiliation in the eyes of his contemporaries. This heroic act convinced few, but the rest felt the spiritual impact of additional Old World. The idea was accepted and approved. Then evolved and continually subject to change.

A man full of love was the son of the Old World, a unique unit and the nearest in terms of psychological and intellectual. Such Individuals sometimes appear. Usually not allowed, are not always endowed with charisma sets the opportunity for wider impact.

People with information about the rescue operation, a believer in redemption, shall carry out any manipulation of the trapped psyche. Did not reach a solution, because their never catastrophic design them will not allow. Suffer

liberation after death. There and then develop or not, the skills and capabilities of the Old World. Faith is telling the good news, hope and the expectation of a better fate, and experience full happiness.

## **A SHORT HISTORY OF MANKIND**

The old The world yearning of people to know, understand, explain.  
Children's questions: what is it? And why?.

Change in the cosmic scale of space concerns swelling, increasingly diverse ingredients, entering them into becoming other, new combinations of connections and relationships. Created an ever more perfect, more subtle, more durable systems, acquiring control of the outside environment. These systems combine, interact, build new and larger structures. In implicitly, spurred by the World beyond global.

Element in this structure, a subsystem of the important but not essential role, is Homo sapiens. Responsive and sensitive, primitive and insatiable, creative and destructive, is a visual link, flexible-body, tools, creative. Accumulated in the whole of humanity, and information seeks to control groups of people and the environment for external expansion. From when it appeared, still enter into a new relationship despite periodic old relations, called ethics or the law, frees himself from their actions, recognize and analyze more fully, subtle, and not knowing, however, is it going to.

Its handling capacity, locally in time and space, crossed, and departed from the level of individual specimens of other living matter. With manual skills passed in the imagination, the minds, which brings together the knowledge unit, and their sum, also in the form recorded, beyond the mind creates knowledge, and Human population is passed on in time.

The development process takes place with difficulty, and recalls the heavy labor, and which are expected in the transition phase of a more conscious symbiosis with the world beyond the locality. Different ideas and information are constantly modified and re-bound in the whole, coherent and understandable.

## **Hallucinations INTELLECTUAL**

Our thinking is not just a question. Departing for our Inside - External World, the outside world, we learn from our senses. Thinking, this inner world of senses. Obtain information visual, tactile, auditory, olfactory. So that the external world does not give it to us, but come from the inside. Originally taken from the Outside and processed in the brain, duplicate and deformed, and then again pass through the ongoing brain activity allow us to their multiple sentience. Through intellectual development, particularly speech and language, constantly or with great frequency are subjected to a kind of workout, dog training spoken language or written language. At the end of themselves, somewhere inside, they often say. While we draw from the outside world primarily through sight, it is in the interior are dominated by the language and inner speech. This gives the impression that the thought is speech, but this idea is correct. Thinking is primarily concerned, what counts is a vision of a visual, olfactory and taste, and touch marginally. Our intellect is a relentless hallucination, the fact that trained, trained, organized by language and speech. Language and speech are auditory hallucinations, a parent today. Therefore, we do not hear voices and do not see ghosts. Auditory hallucinations dominate everything, drove the other senses, dark of them cleared.

The other side of the coin, reverse curiosity of the World, is the fear about ourselves. We may call this fear of death, survival and the desire to fight for survival. This fear creates a doubt, what is good for us, and what is bad. Extends to a person close to us, a group or society. A question about the survival of comrades, dominates the intellect, sometimes silenced, in the form of reflection or cynical considerations, can run out of curiosity, imagination, creative or destructive madness of passion. The other side of the coin, the ethics, the counting of the immediate reactions of others, taking into account anything that might threaten us, the adoption of attitudes, including thinking, intent, context, feelings and emotions, which become a shield, guard, safety. You can not with this release. We are looking for truth, which is compatible with us, the people. Truth quiet, at which we feel good. We do not know whether the path of morality, however, slows down our aspirations, or even vice versa, indicates a more appropriate direction. Involved in the bonds,

we follow to knowledge, and fairness. Varied between them, waves of different fate, doing our human network of what is appropriate and true at the same time.

**METAKNOW**

When will we turn to our will, it sees that it is nevertheless our will. When our rational thinking in the past, sees its irrationality knows that in the future will also see the irrationality of the current thinking. Then it becomes clear that existing and future rationalization is unreasonable. Our feelings and emotions are momentary and at any time may be changed diametrically. Mental equilibrium could be on the skids and loses its sober view. Collective efforts, often led by the influential, a group of cheeky suggestive selfish, do not give much chance for real orientation in the actual situation. So what remains? In addition to faith and prayer, we have a personal reflection, congenital, genetic disposition and orientation, and numerous cases and reduce the external variables. They all make up the unlikely success, successful future and a unique genius. Weak and precious feeling better, when they make the vote, raise the joy and happiness, and optimism and the Trust can give you a warm colors and wake up to be adopted universally healthy rationality, based on respect and temporal relevance. And by the way: if we have the ability, or indeed a firm resolution to "Get out of this speeding train" ?

## LITTLE BIG WORLD

Our perception of the world contains within it a original sin. The suggestion of a locality, the strong influence of our immediate environment, supporting the belief that what is closest and then also gives us a completely unwarranted speculation as to the most remote places or time. Even when described as contemporary cosmological notion of the observable universe size  $3 * 10^{26}$  cm or groups of galaxies to escape the model, it is seen as still unthinkable just to describe what we know for example, using models to facilitate or elementary particles. Our reluctance, and perhaps the fear of anything which we can not directly control what we can not tame, and the unpredictable impact of freely proclaimed views on psychology and human behavior, specifically inhibits the speed of our development and understanding, not allowing the use inherent in our minds of potential opportunities.

If we do a simple assumption that any idea of humanity, is a tiny element of the whole, once the potential field of ideas and speculation opens up disproportionately. However, if we imagine the possibility of this leap to a higher level, to that which they invent, then we know our future in a very broad, even at the time seemed quite unlikely. And these ideas can be found in each individual prayer, and in the statements of people whose dreams, once unreal finally come true, as in fairy tales, whose content in the era of computerization are real,

understandable and technically conceivable, ranging from children “wonderful mirror” to “wonderful table” network ?

The image of our little world and, in particular the role leaves. Ethical guidelines, as well as fashionable chaos is the extreme belief in full freedom and free will, or lack thereof. However, neither we, the people, we can not make moral choices, only the traditional sense of Free will as we can not decide that the born moments or what we think, feel and even do, or given to us God's principles and rules are not given to us once and for all and any changes or circumstances. To his will, we have some important insights, but not so significant, and our reactions, including those sentenced to death for the other, are in fact a form of limited capacity, helplessness and powerlessness. We are in net in some great, unimaginable System, in an ENTIRE, but we do not know what. Afraid of that, but for a moment stilled in different ways, trusting and believing that, for example in the WHOLE play an important role so that we will be informed in advance what to do to survive, persevere, expanding, be well. Guided by this belief, we should not give up something in which we are equipped. Abandoning the use of imagination, gain nothing, and wanting to harness it to work we need to create a great line where people (of all humanity?) That our imagination is not only a tool to manipulate, deceive, and simple to use other people. In this approach, both understood each faith, religion and different ideas, such as oriented materialistic, have equal rights. All together, seen as completely detached from designata, are devoid of the characteristics of conflict, as no rules scattered puzzle, although not matching each other, may be considered as a starting point for any exploration.

## **SUBJECTIVE OBJECTIVITY**

Usually, if something happens independently of our will, and we know what is happening, we define it as objective knowledge. When we believe something, but do not know if this is in accordance with the world objectively, we talk about the subjectivity of perception. The problem is the inability to know the objective without subjective perception. At the end of our subjective, strong belief, what we consider to be obvious, our objective is building refinement things. In short, objectivity is just another kind of subjectivity. For example, five plus five equals ten. It seems that the objective accuracy. Whether we like it or not, whether a longer time to live or just born, this regularity is always true. However, all mathematics, including algebra, and hence the addition of a rule is subjective invention man. It subjectivity created by others. This is irrespective of our will, but only superficially, we really need to direct our willingness to accept this rule. Only then is entitled to objectivity.

Our perception is always local. We realize that, apart from us is something else. Some further world. So we see locally, on a limited basis. Simple to travel to another city demonstrates the difference to us, which is further away. Very difficult to assume that our locality is still synonymous with the whole, much more than the universe, global, continuous vision of everything, including the future and the past, including all features and functions of all, though this is not manifested or potentially manifested. Therefore, imagine what it is as we move bound our threshold farther. Knowing our imagination and develops, evolves and expands our opportunities and horizons. Therefore, if our capacity to subjective - objective in cognition reveal anything, it's just a local world. If they come out even further, create a little bigger, a new, but only a local world. For example, are the numbers that expressed in the form of numbers, very large numbers, are not able to approach the idea of infinity. Thus, we study a number of local sets of figures, and those big, bigger than the biggest, we imagine a kind of continuum, although we are not able to either inspect or manipulate this. When the digit 1 takes arbitrarily large number outside the local environment, with this assumption, we may say that  $1 + 1 = 1$ ,  $1 - 1 = 1$ , etc. Similarly, we find, respectively, expressed the laws of logic, eg  $1 \wedge 1 \Leftrightarrow 1$ ,  $1 \vee 1 \Leftrightarrow 1$ , etc. When the number is too large, we can assume that we are not subjected to manipulation. Similarly, the area between any numbers. Doing them such fractions:  $0.1 + 0.1 = 0.1$ ,  $0.1 \cdot 0.1 = 0.1$ ; etc.

So, what is it something that convinces us of the rightness of what distinguishes the healthy from the mad man, an adult from the child, and Homo sapiens from an animal? What is it we know that if something is not World Objective? Well, we can lead this kind of thinking that everything living or inanimate world is in constant loading Feedback? Plants respond to light and water, causing the animals to stimuli instinctive behavior, and we the people of the complex set of external and internal signals. Participate in feedback, not only between the external world and personal response, but also between our internal footprint, an imaginary, artificial image, and our response. We are in the minds of peculiar reality simulator, and we are with him in feedback. This feedback mechanism was made independently of our will, for example, allows me to *write* and readers *read this* and then manipulate that. This mechanism, once tripped, we can not always work, and allows for the formulation of ideas. We can not know without it, never will feel no sensation, did not we think otherwise. Therefore, it is immaterial from this point of view, or will cut joke, or invent the theory of relativity. So do not exclude the dual feedback? Do not get rid of their subjective objectivity. Do not stop to distinguish a truth from falsehood, whatever it was not. We will always be Loop? In this mechanism, and even when we try to true describe it, and so we are gripped by double no free. Similarly, we can imagine a mathematical model showing the possibility of our limited knowledge. For example, if 1 is any natural number, which means the size of both natural and arbitrarily large number outside the local area are:

$$1 + 1 = 2 \Leftrightarrow 1 + 1 = 1, \quad 2 \hat{=} 1 = 1 \Leftrightarrow 1 - 1 = 1, \text{ etc.}$$

(Locally)            (except locally)            (locally)            (except locally)

This dilemma, the absence of constraints and also the lack of imagination, reality constraints, we have all the time, we carry it within us and we reduce to a minimum. The reduction is based on the fragmentation of a locality, believe in a collective sense of objectivity and the finding of a positive feedback, use it and leaving only after the exhaustion of its capacity to acceptable, the expected level. Therefore. Need is the mother of invention ? and point of view depends on the point sit ? That is why Christ was crucified, Copernicus was ridiculed and Giordano Bruno burned at the stake. And since then, could be maliciously say little has changed, with the exception of course of action. So changed ? Not know ? Today you can accomplish the same thing, to control the pace and directions of development, stuck in the current collective sense of objectivity, without interbreeding, ridicule or burning at the stake.

## **I ALSO AM WORLD**

In this, the presented model now manipulations of reality, distinguished look at himself. This view has a dual nature:

1. Firstly, we feel and see, experience, hear, think, and this is direct experience;
2. Secondly, we feel, see, experience, hear, think, and it is a reflection, a model of reality;

These two natures are merging, because while I see and I know that I see something I think and I am aware of your thinking, I heard such noise and I know that my body is serviceable hearing, etc.

It is this very feature a combined sense of subjectivity and objectivity, watching himself, makes you perceive the external world, appears to be seeing as our direct view, while it is only a model. When you barely regain consciousness, or being in a dream, somehow we know that we are, we have some original, simple message, an indication that although not manifest any activity, or are not running the senses, we feel our existence.

This duality gives rise to profound reflections, gives a sense of depth and mystery, can not look at the world as a simple set of things, events, thoughts. Forces us to meditate on the mysterious nature. This special FIRST experience is our primary, but only the simplest model, the first vague feelings of the outside

world, contact, contact point from which to begin our construction of the self. We do not know each other well. We have only a sense of the existence of contact.

Politicians, rulers, managers of companies or institutions, people are looking for effective ways to implement these intentions, always used the products of human thought and imagination to achieve your goals. There is no indication that this will change now or in the future. However, this does not limit the search path to liberation from the influence of their interactions and approaching a point of sustainable or subjective (in the sense independent of the target or unconscious influence, or aggression, other) image of reality. This is a continuous process, a specific act of will, which was accompanied by an intelligent, gifted with imagination predators. Conservation of the tight vigilance, sensitivity to avoid the pitfalls and mistakes in this connection, the search for ways of liberation from the dependence of material, moral, social, is thus a permanent feature of all these trends. So is some originality here, the behavior of these methods in secrecy, to avoid confrontation and use Hidden language ? second or subsequent agreements plane hidden under the exterior. And that's just some of the techniques used in the past and constantly improved to the present. Example being the Nicolaus of Oresme, who 100 years before Copernicus preached similar ideas to him, and put them to his sharp criticism. But this criticism was a real possibility of presenting a completely new ideas. Acted in accordance with the applicable rule out media: No matter what they say, it's important that talking ? He, too, smuggled in this way a new way of thinking and still do not know what were his real intentions.

We assume that every kind of imagination is somehow adequate to the reality, is it some reflection, reflection, sometimes less, sometimes more clearly, once practically used, and another time remaining in the reserve, unused luggage for later, if only for comparison.

This obviously does not prejudge that resulting from the practical side of abstraction, from the fruits of our current science and technology to diverse forms of culture (including religion), is a form of hypocrisy, something with a cold calculation, first appeared in the history of mankind and should be denounced depart . Nothing could be further from the truth. Do not have a negative character or plaques Mendelv nor Moses, nor the modern physics, nor the New Testament. Only when we think about it we should remember that the concreteness of our thinking is apparent. If we take our idea of abstraction and descend to the concrete guidance, recommendations or standards, they all belong to this kind of imagination, which is entirely abstract. Between Moses and Christ as a man, a man, and their mission from God is an invisible barrier. This barrier, which separates two different ways of imagining the world. Without this amendment, no adjustment duality keeps that up, we always commit an error. His word will be confusing the concepts, thinking and the ability to create, develop our minds, explore new areas of human possibility. Abstract world of imagination is not governed by the laws of logic or restrictions on existing knowledge. Is entirely acceptable, all views are

acceptable and it is not mutually exclusive. In short, if one believes that God is, or that he was not there, do not deny the other. Even if someone comes to mind, and that God is, and it is not, it is also this view should be adopted. Everything will be born in the abstract is like a new element in this puzzle, it may not fit the next piece but must wait for the next and retry the new arrangement, yet abstract image.

When we follow from concrete to abstract, the image appears to be feasible and practically useful, but we are locked in a certain limit. It derives from the nature in which they were formed all living creatures, the organisms known to us. Their emergence and continued existence must be accompanied by a stable and within the repeatability of determination we are in a coupling with the environment, create generalized knowledge but it may be, in addition to these assumptions, completely false. The image appears to be stable and very valuable but it reminds of the experimental cage rat in which somebody is constantly backing food after the rat pressed the appropriate button. Even if we assume that alone, can clean and quite by accident which originated from the chaos of nature, it still did not know until the end of her character and we do not know how long on such principles will be able to exist.

## **IF It is so well WHY IT'S SO BAD**

If you are already aware of the possibility of thinking of alternative ideas to create the grid, the matrix of ideas, which we do not antagonize, because there is no contradiction between them, then why still create problems, we find each other, we search for arguments in support of our motives and our views depressions adversaries? Why the rush to fight the aggression and to view himself in the center of attention.

People inherited from their ancestors a luggage behavior, peculiar hump, which is not easy to neutralize. Descriptions of the behavior of chimpanzees, living in freedom, show considerable similarities of human and social behavior of this species. Need to live in groups where the greatest punishment is exclusion, the need to comply with the individuals or groups of aggressive and dominant, the habits that have continued impact on our thinking and behavior (as in chimpanzees). Does not alter the pressure or level of education, or scientific methodology based on

experience, having to justify and repeatability of the phenomena studied. Need to reckon with the group, habits of its members, often inhibited in the history of the way to faster and greater development. Any new idea in science, from antiquity through Copernicus, Galileo, or Einstein, was adopted by the then environment science with great caution. So we have to overcome the barrier, dam, and even the front line before it manages to get the box for ways of thinking, which is different.

Why is that? Because all our artificial, man-made environment, is the result of collaboration, a limited principle of the weakest link. It all works, it comes like clockwork, brings tangible, positive results, thanks coordination, specialization, collective action. And where joint action can not be lawlessness, there is no place for eccentrics, the originals. Must be guaranteed the ability to act effectively, and that is in opposition to the multiplicity and diversity, freedom and all that what we define as "jokingly"? Society uncoordinated movements ? Thinking, emotions and feelings must be something to serve, must be consistent with what think, feel and live the other members of the group. Individualism is tolerated only so long as it does not harm the group. There are various groups and, if possible, you can find something for themselves, but to suddenly come up and do something that goes beyond the barriers? It's social death, exclusion, job loss, malice, mobbing, divorce, ridicule, or other ? Very pleasant experience from disinterested neighbors ?????. This barrier is probably the most difficult. She crucified Christ and destroyed the other going straight and open path to a fully open mind and personality.

Factors aggression and loyalty associated unconscious behavioral cause peculiar way of thinking about reality. Do not allow to leave thoughts or ideas of abstract in the abstract. Produce a continuous emphasis on the practical side, and forced to seek the following: as something you do not know, or somehow try to imagine yourself, use the here and now? Therefore, the gods descend to earth. Therefore, meet with people and give them concrete, practical advice. In this way, free but not good for anyone ? considerations suddenly acquire a specific, targeted relevance, useful, and finally as an integral part, are, even in the harnessed aggression mechanism for individuals and allegiance to the group. Our truth, and science, is the result of specific communities in which they are hatched, that child aggression and loyalty within a given culture.

Barrier to freedom of truth may also be adaptive responses such as laughter or fear. Having a sense of security, react with joy. Without security, in the case of an emergency, every new call the reverse reaction, fear and terror. Laughter and fear are two sides of same coin. The actual response depends ultimately only on the mood and feeling that something we do not threaten.

When people ? Hard to understand something?? but they have no sense of danger behave freely. At it does not matter whether they are in fact safe. What matters is the subjective reception and the response of emotional tension, or geared to escape, or the opposite curiosity. Enough good association and memory.

Sometimes such reactions inhibit the possibility of learning, where science, theories or ideas are not someone fall in had ?. When there is an unknown direction in culture, there are on the agenda.

There is no such thought, idea, or a man you can not laugh, ignore or humiliate. There is no protection against organized crime, malicious beaters. Laughter is an unusual, strong arms, an effective means call the desired effect.

## **MAN, the exception OR REGULARITY**

If we consider who we are, who is the man and all mankind, is irresistibly impose themselves distinct currents, which can easily see. These currents directing our attention to us, inside, or the whole outside world, the entire surrounding area, give rise to views antropocentre sighted man, or vice versa as part of a comprehensive built-in, larger systems. These issues are always aroused anxiety, while willing to find answers.

Outlined trends are visible both in religious ideas, where a man is seen as unique, gifted with special powers and privileges, such as Judaism or Christianity, or as part of a larger, divine whole, in the religions of the Far East. A similar dichotomy is noticeable when compared to the materialistic views, where a man is nothing particularly highlighted, as part of nature, although at the highest level of evolution, is born, lives and dies forever, in contrast to the idealistic views that attribute to him a greater or lesser value, which gives a chance for immortality, for example, or any other desired condition such as nirvana.

If we assume that some way, kind of skills given to us by nature, the understanding of reality, or at least orient to what is happening, so to give yourself something council is to have cause-effect relationships, regularities, building hypotheses, ideas and theories, it is within the skills is allowed us to distinguish factors that are important from the less important, until completely invalid. So when we generalize the inquiry into the outside man, we can ask whether in the universe, in its entirety, there may or Exceptions will only CORRECTNESS. A consequence of this raises the next question: does the fact of the relevant factors, to the invalid, empowers us to align exceptions = Important and Accuracy = Never mind. And although at first it seems completely unauthorized alignment above, but we can see that the proponents of anthropocentrism, as well as his opponents, in fact cultivate such thinking. For the believer, really important is God and Man, that exceptions to the Asian religions sometimes extreme form, take for example, that the exception is everything, and regularity of the free expression of that exception. Similarly, the materialists think, for the accuracy of this type of game, a kind of

puzzle, a kind of nightmare or hedonistic impressionistic, in which (we, as an exception or the effect of regularity), we were entangled regardless of our will. Has a beginning and an end, but certainly no deeper meaning, which is emotionally void. Often under the influence of such views in many natural human emotions and feelings, in the ordinary reflex, sizzling as â?? Melted lard ????? In fact, and both sides seem to be locked up for part of Reality, overall inhibition in cognition, self-limited. Build a kind of perception of marginal unnecessarily.

Risk therefore declare that man is the exception and accuracy simultaneously. And even something more, something like ? Without arguments ? That the proposed abolition of the laws of logic is justified by the level of general considerations, the high level of abstraction, ranging far beyond the world designates. Limited to a man, so and not otherwise currently perceived, is apparent. We need to look at the whole and decide whether the strength of the certificates as we know it is sufficiently convincing. If the proposals are not satisfactory, you can re-attack the rise, pointing to contradictions or missing items. However, since we can do both with one example from the idealists, like the other, for example, materialists looking eyes, look over these boundaries, he asks us to adopt a presumption of the existence of a matrix whose elements are the two streams and at the same time do not exclude that there may be more. Finally, any theory will have weaknesses.

If you do not want to be a passive observer, you can make serious steps, passing over those boundaries further away.

Presented way of thinking, it is best not to take too literally right away, but taken as a construction of possible scenarios. However, it is taken seriously the conclusions derived from it. This will result in a network of views which may be beneficial and neglect, or push to the margins of the accompanying negative emotions and feelings.

## **MORALITY ETHICAL**

When there are many situations in life that had not occurred, while there are a large number, to determine moral standards no longer a simple function. It is not only a deduction, clarification of the earlier standards, but it starts to resemble the bill argument. It is not usual in this system two or three equations with two or three unknowns, but rather a bill or a hundred thousand equations with a hundred or a thousand unknowns. Number of specific standards is necessary if very large. Accompanied by the need to recognize the new situation, and requires the formulation of standards then persuade others to their widespread use.

At the same time the variability of the social world of economic or social situations is so large that the rate of occurrence of new situations, their creation, is greater than the possibility of processing information about them. Finally we come to a situation where the recipients or potential contractor of moral norms, are left alone. They can count on to give them moral principles, or because someone failed to communicate them, or no one even had time to formulate these standards.

## **MORAL DILEMMAS**

Moral dilemmas create a kind of trap, compliance with the standards of moral support or allow to be used by people who do not respect any moral principles. For example, perjury in the court as we speak only the truth, multimillion-dollar civil murder (the Holocaust) with a requirement to abstain and resist killing ( consent to the death penalty is associated with the mass murders ). One can kill, and others absolutely not. Supporting rogue state politicians associated with the Economic actors, while crude agree tax law from the fair. Requirement is not being dissatisfied to customers even if such immoral to accept payment from sources morally questionable, accept various forms of prostitution, graft, drug trafficking or arms trafficking, etc., in accordance with the principle that money does not stink.

It seems that when people use the immoral moral rules to human morality, it should be entitled to some kind of self-defense. Such behavior, which in other circumstances would be immoral especially when their weight to the offense of indecent is not great.

It is much more difficult dilemma is, when are violated fundamental human values. Then moral judgments should at least part of the responsibility, and hence the moral burden, imposed on persons or organizations responsible for the creation of a situation or a lack of neutralizing such as when someone kills out of desperation, hunger, distress and helplessness.

## **NA CONCLUSION**

At the end we make some summary observations. If we look retrospectively at previous history of mankind, we see that all engaged in the discovery and progress within the framework of existing, modified or extended area of the ball hurriedly imagination. It provides a protection zone, or outer layer of the area in which they are subjecting to detail manipulation solutions.

It follows that each of our image or the future discovery, our capacity to know what is not understood, can not go beyond that framework. In other words, we, the people, we are a bottleneck, the main obstacle to the understanding of reality, even for the determination of relative truth. Our future ability to survive and to avoid external adversities, will depend largely on the quantity and diversity created in the imagination of forms, structures and relationships. The history of humanity will last as long as far as our imaginations outstrip the world who are with us. This amazing trick, which is perhaps humanity has a chance to come, eternal life can only produced in the biological inflation, as previously expanded rapidly spacetime created a place for our cosmological world famous.

To generalize the previous contents of the final extract in the perception of objective reality, a picture, which resembles the matrix impossible to solve in a rational manner. Number of necessary action, unknowns, their comparability is too big. On the other hand we are, with our attitude in this picture. The easiest way is to indicate the two extreme attitudes:

1. Displacement, rejection, reluctance to reality as seen,
2. Addressing the dilemma by:
  - a. simplification of reality, namely:
    - Â systematic research,
    - Â reference to some authority such as God, Nature, Ancestors, etc.
  - b. comprehensive expression of reality, namely:
    - Â art,
    - Â speculation (including the game's imagination).

Intended suggestion here indicates the possibility of the use of various speculations, sophisticated, aroused, but controlled, to include cognitive processes.
